Public consultation an EU framework for markets in crypto-assets

> Fields marked with * are mandatory.

Introduction

This consultation is also available in German and French.

Background for this public consultation

As stated by President von der Leyen in her political guidelines for the new Commission, it is crucial that Europe grasps all the potential of the digital age and strengthens its industry and innovation capacity, within safe and ethical boundaries. Digitalisation and new technologies are significantly transforming the European financial system and the way it provides financial services to Europe's businesses and citizens. Almost two years after the Commission adopted the Fintech action plan in March 2018[1], the actions set out in it have largely been implemented.

In order to promote digital finance in Europe, while adequately regulating its risks, in light of the mission letter of Executive Vice-President Dombrovskis the Commission services are working towards a new Digital Finance Strategy for the EU. Key areas of reflection include deepening the Single Market for digital financial services, promoting a data-driven financial sector in the EU while addressing its risks and ensuring a true level playing field, making the EU financial services regulatory framework more innovation-friendly, and enhancing the digital operational resilience of the financial system.

This public consultation, and the parallel public consultation on digital operational resilience, are first steps to prepare potential initiatives which the Commission is considering in that context. The Commission may consult further on other issues in this area in the coming months.

As regards blockchain, the European Commission has a stated and confirmed policy interest in developing and promoting the uptake of this technology across the EU. Blockchain is a transformative technology along with, for example, artificial intelligence. As such, the European Commission has long promoted the exploration of its use across sectors, including the financial sector.

Crypto-assets are one of the major applications of blockchain for finance. Crypto-assets are commonly defined as a type of private assets that depend primarily on cryptography and distributed ledger technology as part of their inherent value[2]. For the purpose of this consultation, they will be defined as "a digital asset that may depend on cryptography and exists on a distributed ledger". Thousands of crypto-assets, with different features and serving different functions, have been issued since Bitcoin was launched in 2009[3]. There are many ways to classify the different types of crypto

assets[4]. A basic taxonomy of crypto-assets comprises three main categories: 'payment tokens' that may serve as a means of exchange or payment, 'investment tokens' that may have profit-rights attached to it and 'utility tokens' that may enable access to a specific product or service. The crypto-asset market is also a new field where different actors - such as the wallet providers that offer the secure storage of crypto-assets, exchanges and trading platforms that facilitate the transactions between participants – play a particular role

Crypto-assets have the potential to bring significant benefits to both market participants and consumers. For instance, initial coin offerings (ICOs) and security token offerings (STOs) allow for a cheaper, less burdensome and more inclusive way of financing for small and medium-sized companies (SMEs), by streamlining capital-raising processes and enhancing competition. The 'tokenisation' of traditional financial instruments is also expected to open up opportunities for efficiency improvements across the entire trade and post-trade value chain, contributing to more efficient risk management and pricing[5]. A number of promising pilots or use cases are being developed and tested by new or incumbent market participants across the EU. Provided that platforms based on Digital Ledger Technology (DLT) prove that they have the ability to handle large volumes of transactions, it could lead to a reduction in costs in the trading area and for post-trade processes. If the adequate investor protection measures are in place, crypto-assets could also represent a new asset class for EU citizens. Payment tokens could also present opportunities in terms of cheaper, faster and more efficient payments, by limiting the number of intermediaries.

Since the publication of the FinTech Action Plan in March 2018, the Commission has been closely looking at the opportunities and challenges raised by crypto-assets. In the FinTech Action Plan, the Commission mandated the European Banking Authority (EBA) and the European Securities and Markets Authority (ESMA) to assess the applicability and suitability of the existing financial services regulatory framework to crypto-assets. The advice[6] received in January 2019 clearly pointed out that while some crypto-assets fall within the scope of EU legislation, effectively applying it to these assets is not always straightforward. Moreover, there are provisions in existing EU legislation that may inhibit the use of certain technologies, including DLT. At the same time, EBA and ESMA have pointed out that most crypto-assets are outside the scope of EU legislation and hence are not subject to provisions on consumer and investor protection and market integrity, among others. Finally, a number of Member States have recently legislated on issues related to crypto-assets which are currently not harmonised.

A relatively new subset of crypto-assets – the so-called "stablecoins" - has emerged and attracted the attention of both the public and regulators around the world. While the crypto-asset market remains modest in size and does not currently pose a threat to financial stability[7], this may change with the advent of "stablecoins", as they seek a wide adoption by consumers by incorporating features aimed at stabilising their 'price' (the value at which consumers can exchange their coins). As underlined by a recent G7 report[8], if those global "stablecoins" were to become accepted by large networks of customers and merchants, and hence reach global scale, they would raise additional challenges in terms of financial stability, monetary policy transmission and monetary sovereignty.

Building on the advice from the EBA and ESMA, this consultation should inform the Commission services' ongoing work on crypto-assets[9]: (i) For crypto-assets that are covered by EU rules by virtue of qualifying as financial instruments under the Markets in financial instruments Directive – MiFID II – or as electronic money/e-money under the Electronic Money Directive – EMD2 – the Commission services have screened EU legislation to assess whether it can be effectively applied. For crypto-assets that are currently not covered by the EU legislation, the Commission services are considering a possible proportionate common regulatory approach at EU level to address, inter alia, potential consumer/investor protection and market integrity concerns.

Given the recent developments in the crypto-asset market, the President of the Commission, Ursula von der Leyen, has stressed the need for "a common approach with Member States on crypto-currencies to ensure we understand how to make the most of the opportunities they create and address the new risks they may pose"[10]. Executive Vice-president Valdis Dombrovskis has also indicated his intention to propose a new legislation for a common EU approach on crypto-assets, including "stablecoins". While acknowledging the risks they may present, the Commission and the Council have also jointly declared that they "are committed to put in place the framework that will harness the potential opportunities that some crypto-assets may offer"[11].

Responding to this consultation and follow up to the consultation

In this context and in line with Better regulation principles, the Commission is inviting stakeholders to express their views on the best way to enable the development of a sustainable ecosystem for crypto-assets while addressing the major risks they raise. This consultation document contains four separate sections.

First, the Commission seeks the views of all EU citizens and the consultation accordingly contains a number of more general questions aimed at gaining feedback on the use or potential use of crypto-assets.

The three other parts are mostly addressed to public authorities, financial market participants as well as market participants in the crypto-asset sector:

- **The second section seeks feedback from stakeholders on whether and how to classify crypto-assets.** This section concerns both crypto-assets that fall under existing EU legislation (those that qualify as 'financial instruments' under MiFID II and those qualifying as 'e-money' under EMD2) and those that do not.

- **The third section invites views on the latter, i.e. crypto-assets that currently fall outside the scope of the EU financial services legislation. In that first section, the term 'crypto-assets' is used to designate all the crypto-assets that are not regulated at EU level[12]. At certain point in that part, the public consultation makes further distinction among those crypto-assets and uses the terms 'payment tokens', "stablecoins" 'utility tokens', 'investment tokens'..** The aim of these questions is to determine whether an EU regulatory framework for those crypto-assets is needed. The replies will also help identify the main risks raised by unregulated crypto-assets and specific services relating to those assets, as well as the priorities for policy actions.

- **The fourth section seeks views of stakeholders on crypto-assets that currently fall within the scope of EU legislation, i.e. those that qualify as 'financial instruments' under MiFID II and those qualifying as 'e-money' under EMD2. In that section and for the purpose of the consultation, those regulated crypto-assets are respectively called 'security tokens' and 'e-money tokens'.** Responses will allow the Commission to assess the impact of possible changes to EU legislation (such as the Prospectus Regulation , MiFID II, the Central Security Depositaries Regulation, ...) on the basis of a preliminary screening and assessment carried out by the Commission services. This section is therefore narrowly framed around a number of well-defined issues related to specific pieces of EU legislation. Stakeholders are also invited to highlight any further regulatory impediments to the use of DLT in the financial services.

To facilitate the reading of this document, a glossary and definitions of the terms used is available at the end.

The outcome of this public consultation should provide a basis for concrete and coherent action, by way of a legislative action if required.

This consultation is open until 19 March 2020.

I. Questions for the general public

As explained above, these general questions aim at understanding the EU citizens' views on their use or potential use of crypto-assets.

Question 1. Have you ever held crypto-assets?

○ Yes
○ No
⦿ Don't know / no opinion / not relevant

Question 3. Do you plan or expect to hold crypto-assets in the future?

○ Yes
○ No
⦿ Don't know / no opinion / not relevant

II. Classification of crypto-assets

There is not a single widely agreed definition of 'crypto-asset'[13]. In this public consultation, a crypto-asset is considered as "*a digital asset that may depend on cryptography and exists on a distributed ledger*". This notion is therefore narrower than the notion of '*digital asset*[14] that could cover the digital representation of other assets (such as scriptural money).

While there is a wide variety of crypto-assets in the market, there is no commonly accepted way of classifying them at EU level. This absence of a common view on the exact circumstances under which crypto-assets may fall under an existing regulation (and notably those that qualify as 'financial instruments' under MiFID II or as 'e-money' under EMD2

as transposed and applied by the Member States) can make it difficult for market participants to understand the obligations they are subject to. Therefore, a categorisation of crypto-assets is a key element to determine whether crypto-assets fall within the current perimeter of EU financial services legislation.

Beyond the distinction 'regulated' (i.e. 'security token', 'e-money token') and unregulated crypto-assets, there may be a need for differentiating the various types of crypto-assets that currently fall outside the scope of EU legislation, as they may pose different risks. In several Member States, public authorities have published guidance on how crypto-assets should be classified. Those classifications are usually based on the crypto-asset's economic function and usually makes a distinction between 'payment tokens' that may serve as a means of exchange or payments, 'investment tokens' that may have profit-rights attached to it and 'utility tokens' that enable access to a specific product or service. At the same time, it should be kept in mind that some 'hybrid' crypto-assets can have features that enable their use for more than one purpose and some of them have characteristics that change during the course of their lifecycle.

---

[13] This section concerns both crypto-assets that fall under existing EU legislation (those that qualify as 'financial instruments' under MiFID II and those qualifying as 'e-money' under EMD2) and those falling outside.

[14] Strictly speaking, a digital asset is any text or media that is formatted into a binary source and includes the right to use it.

Question 5. Do you agree that the scope of this initiative should be limited to crypto-assets (and not be extended to digital assets in general)?

- ◉ Yes
- ◯ No
- ◯ Don't know / no opinion / not relevant

5.1 Please explain your reasoning for your answers to question 5:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Crypto assets are already defined (see ESMA and EBA papers on Cypto Assets as well as AMLD4). For the purpose of this regulation, it is not practicable to expand the scope of the definition to Digital Assets.

Question 6. In your view, would it be useful to create a classification of crypto-assets at EU level?

- ◉ Yes
- ◯ No
- ◯ Don't know / no opinion / not relevant

6.1 If you think it would be useful to create a classification of crypto-assets at EU level, please indicate the best way to achieve this classification (non-legislative guidance, regulatory classification, a combination of both, ...).

Please explain your reasoning:

> EU harmonized regulatory classification (e.g. MiFiD III, MAR/MAD, PRIIPS etc.; for more on this please see our suggestions provided by our paper "EU Regulation Paper" free down-load at http://thinkblocktank.org /publications/).

Question 7. What would be the features of such a classification?

When providing your answer, please indicate the classification of crypto-assets and the definitions of each type of crypto-assets in use in your jurisdiction (if applicable).

Please explain your reasoning:

> We need a strict application of the financial instruments and securities defintion. Currently, some EEA member states qualify Virtual Currencies as financial instruments whilst others do not (cf. ESMA and EBA Advice on Crypto Assets, Jan 2019). For more on this please see our suggestions provided by our paper "EU Regulation Paper" free down-load at http://thinkblocktank.org/publications/

Question 8. Do you agree that any EU classification of crypto-assets should make a distinction between 'payment tokens', 'investment tokens', 'utility tokens' and 'hybrid tokens'?

- ◉ Yes
- ◎ No
- ◎ Don't know / no opinion / not relevant

Question 8.1 If you do agree that any EU classification of crypto-assets should make a distinction between 'payment tokens', 'investment tokens', 'utility tokens' and 'hybrid tokens', please indicate if any further sub-classification would be necessary:

> However, we believe it can be only a functional classification serving as an ancillary one rather than replacing existing legal categories (see our answer to Q 16 below). We would not recommend to use "hybrid tokens" as a separate differentiator. Hybrid tokens are a mix between the three named classification types and a separate category for these kind of tokens are not relevant for regulatory purposes. As sub-classification we would see stable coin under payment token and asset back token as well as derivative token under security token.

8.2 Please explain your reasoning for your answers to question 8:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> A sub-classification may be useful when looking at simple "payment token" and special sib-category of stable coins. Also when looking at security token we can already see special categories of "asset backed token" and "derivative tokens". Hence, the categorization shall be flexibel to provide flexibel set of categorization facing the market developments.

The Deposit Guarantee Scheme Directive (DGSD) aims to harmonise depositor protection within the European Union and includes a definition of what constitutes a bank 'deposit'. Beyond the qualification of some crypto-assets as 'e-money tokens' and 'security tokens', the Commission seeks feedback from stakeholders on whether other crypto-assets could be considered as a bank 'deposit' under EU law.

Question 9. Would you see any crypto-asset which is marketed and/or could be considered as 'deposit' within the meaning of Article 2(3) DGSD?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> No.
> Art 4 No 1 para 1 CRR (EU/575/2013) defines 'credit institution' as an undertaking of a business which is to take deposits or other repayable funds from the public and to grant credits for its own account.
>
> From a legally dogmatic point of view it does not seem possible that crypto-assets may represent deposits, as the deposit business is targeted strictly at legal tender (ie: 'funds' in the narrow sense). Crypto-assets may however represent e-money under specific circumstances pursuant to the second E-Money-Directive (2009/110/EC). E-money in essence constitutes deposits, but pursuant to a legal fiction it is treated differently. Crypto-assets should therefore follow the regime of e-money along with the designated investor protection, provided that the crypto-assets constitute e-money.

III. Crypto-assets that are not currently covered by EU legislation

This section aims to seek views from stakeholders on the opportunities and challenges raised by crypto-assets that currently fall outside the scope of EU financial services legislation[15] (**A.**) and on the risks presented by some service providers related to crypto-assets and the best way to mitigate them (**B.**). This section also raises horizontal questions concerning market integrity, Anti-Money laundering (AML) and Combatting the Financing of Terrorism (CFT), consumer /investor protection and the supervision and oversight of the crypto-assets sector (**C.**).

----

[15] Those crypto-assets are currently unregulated at EU level, except those which qualify as 'virtual currencies' under the AML /CFT framework (see section I.C. of this document).

A. General questions: Opportunities and challenges raised by crypto-assets

Crypto-assets can bring about significant economic benefits in terms of efficiency improvements and enhanced system resilience alike. Some of those crypto-assets are 'payment tokens' and include the so-called "stablecoins" (see below) which hold the potential to bridge certain gaps in the traditional payment systems and can allow for more efficient and cheaper transactions, as a result of fewer intermediaries being involved, especially for cross-border payments. ICOs could be used as an alternative funding tool for new and innovative business models, products and services, while the use of DLT could make the capital raising process more streamlined, faster and cheaper. DLT can also enable users to 'tokenise' tangible assets (cars, real estate) and intangible assets (e.g. data, software, intellectual property rights, ...), thus improving the liquidity and tradability of such assets. Crypto-assets also have the potential to widen access to new and different investment opportunities for EU investors. The Commission is seeking feedback on the benefits that crypto-assets could deliver.

Question 10. In your opinion, what is the importance of each of the potential benefits related to crypto-assets listed below?

Please rate from 1 (not important at all) to 5 (very important)

	1 (not important at all)	2	3	4	5 (very important)	Don't know / no opinion / not relevant
Issuance of utility tokens as a cheaper, more efficient capital raising tool than IPOs	◉	○	○	○	○	○
Issuance of utility tokens as an alternative funding source for start-ups	○	◉	○	○	○	○
Cheap, fast and swift payment instrument	○	○	◉	○	○	○
Enhanced financial inclusion	○	○	◉	○	○	○
Crypto-assets as a new investment opportunity for investors	○	○	◉	○	○	○
Improved transparency and traceability of transactions	○	○	○	◉	○	○
Enhanced innovation and competition	○	○	◉	○	○	○
Improved liquidity and tradability of tokenised 'assets'	○	○	○	◉	○	○
Enhanced operational resilience (including cyber resilience)	○	○	◉	○	○	○

Security and management of personal data	○	○	●	○	○	○
Possibility of using tokenisation to coordinate social innovation or decentralised governance	○	○	○	●	○	○

10.1 Is there any other potential benefits related to crypto-assets not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> In combination with smart contracts crypto assets can significantly reduce a lot of risks associated with the classic financial markets (i. e. counter party risk for example). Nevertheless, smart contracts also come with associated new risk that would have to be taken care of (governance).

10.2 Please explain your reasoning for your answers to question 10:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Classic utility tokens are hardly issued anymore as the main benefit of the blockchain technology does not per se lie in those utilities (eg. access function to some software platform or a voucher function, both of which may be achieved without a blockchain). Therefore, they are not exactly suitable or rather competitive with regard to fundraising purposes even if tokens come with additional functions/utilities.
> Security tokens may be interesting for investment purposes once their liquidity improves (eg: establishment of trading venues for tokenized financial instruments).
>
> Decentralised governance seems to be the most important factor of distributed ledger technologies as a whole. It enables such things as electronic identity which in turn enables identification and communication (eID, electronic signature, etc) with authorities as well as other parties on a fully digital level while also complying with data protection and other regulations. From a technological point of view this is closely related to moving from the classic OSI network protocol (Open Systems Interconnection model) to an SSI protocol (Self-Sovereign-Identity).

Despite the significant benefits of crypto assets, there are also important risks associated with them. For instance, ESMA underlined the risks that the unregulated crypto-assets pose to investor protection and market integrity. It identified the most significant risks as fraud, cyber-attacks, money-laundering and market manipulation[16]. Certain features of crypto-assets (for instance their accessibility online or their pseudo-anonymous nature) can also be attractive for tax evaders. More generally, the application of DLT might also pose challenges with respect to protection of personal data and competition[17]. Some operational risks, including cyber risks, can also arise from the underlying technology applied in crypto-asset transactions. In its advice, EBA also drew attention to the energy consumption entailed in some crypto-asset activities. Finally, while the crypto-asset market is still small and currently pose no material risks to financial stability[18], this might change in the future.

----

[16] ESMA, "Advice on initial coin offerings and Crypto-Assets", January 2019.

[17] For example when established market participants operate on private permission-based DLT, this could create entry barriers.

[18] FSB Chair's letter to G20 Finance Ministers and Central Bank Governors, Financial Stability Board, 2018.

Question 11. In your opinion, what are the most important risks related to crypto-assets?

Please rate from 1 (not important at all) to 5 (very important)

	1 (not important at all)	2	3	4	5 (very important)	Don't know / no opinion / not relevant
Fraudulent activities	○	●	○	○	○	○
Market integrity (e.g. price, volume manipulation, ...)	○	○	○	○	●	○
Investor/consumer protection	○	○	●	○	○	○
Anti-money laundering and CFT issues	○	●	○	○	○	○
Data protection issues	○	○	●	○	○	○
Competition issues	○	●	○	○	○	○
Cyber security and operational risks	○	○	○	●	○	○
Taxation issues	○	○	○	○	●	○
Energy consumption entailed in crypto-asset activities	○	●	○	○	○	○
Financial stability	○	●	○	○	○	○
Monetary sovereignty/monetary policy transmission	○	○	○	○	●	○

11.1 Is there any other important risks related to crypto-assets not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Faulty smart contracts (see example here): https://medium.com/@ogucluturk/the-dao-hack-explained-unfortunate-take-off-of-smart-contracts-2bd8c8db3562

11.2 Please explain your reasoning for your answers to question 11:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> The risk with regard to financial stability seems low compared to the other potential risks as the crypto-asset market itself is still rather small compared to the established financial market and therefore likely won't have a lasting (negative) effect on the financial stability. Even if the market around crypto-assets grows, the effects on competition of classical models of the capital market as well as on innovation would seem rather positive.
>
> Unfair competition might in fact be a bigger issue as for example Facebook's Libra combines the companies predominant position with regard to social media (data) with the payment services industry. We see the biggest risks in in Market Integrity, Monetary Policy and Taxation currently, due to no or less regulation and guidance and also the lack of logical & political /policy frameworks given the globalized and borderless transfer of value via crypto.

"Stablecoins" are a relatively new form of payment tokens whose price is meant to remain stable through time. Those "stablecoins" are typically asset-backed by real assets or funds (such as short-term government bonds, fiat currency, commodities, real estate, securities, ...) or by other crypto-assets. They can also take the form of algorithmic "stablecoins" (with algorithm being used as a way to stabilise volatility in the value of the coin). While some of these "stablecoins" can qualify as 'financial instruments' under MiFID II or as e-money under EMD2, others may fall outside the scope of EU regulation. A recent G7 report on 'investigating the impact of global stablecoins' analysed "stablecoins" backed by a reserve of real assets or funds, some of which being sponsored by large technology or financial firms with a large customer base. The report underlines that "stablecoins" that have the potential to reach a global scale (the so-called "global stablecoins") are likely to raise additional challenges in terms of financial stability, monetary policy transmission and monetary sovereignty, among others. Users of "stablecoins" could in principle be exposed, among others, to liquidity risk (it may take time to cash in such a "stablecoin"), counterparty credit risk (issuer may default) and market risk (if assets held by issuer to back the "stablecoin" lose value).

Question 12. In our view, what are the benefits of 'stablecoins' and 'global stablecoins'?
Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

The biggest benefit of (global) stablecoins would seem to be the immediate Delivery versus Payment (DvP). No breach of medium occurs and both conclusion and settlement may be conducted globally without having to switch service providers and/or exchange currencies. Also considering "the entire idea about DeFi which can be achieved/supported by stablecoins and the non-dependency to the current "monopoly intermediaries" (e.g. SWIFT etc.) for cross-border transactions.

Question 13. In your opinion, what are the most important risks related to "stablecoins"?

Please rate from 1 (factor not relevant at all) to 5 (very relevant factor)

	1 (factor not relevant at all)	2	3	4	5 (very relevant factor)	Don't know / no opinion / not relevant
Fraudulent activities	○	●	○	○	○	○
Market integrity (e.g. price, volume manipulation...)	○	○	●	○	○	○
Investor/consumer protection	●	○	○	○	○	○
Anti-money laundering and CFT issues	○	●	○	○	○	○
Data protection issues	○	●	○	○	○	○
Competition issues	○	○	○	●	○	○
Cyber security and operational risks	○	●	○	○	○	○
Taxation issues	○	●	○	○	○	○
Energy consumption	●	○	○	○	○	○
Financial stability	●	○	○	○	○	○
Monetary sovereignty/monetary policy transmission	○	○	●	○	○	○

13.1 Is there any other important risks related to "stablecoins" not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

> Not all stablecoins have to come with a particular risk. As outlined above by the survey it is possible to structure stablecoins without triggering regulations pursuant to MiFID II or EMD2. Such stablecoins essentially represent commodity money like gold-backed money (gold standard which is not applicable to todays fiat money anymore).

13.2 Please explain in your answer potential differences in terms of risks between "stablecoins" and 'global stablecoins':

> The lack of liquidity of not ubiquitously accepted stablecoins may pose an additional risk for stablecoins versus global stablecoins.

Some EU Member States already regulate crypto-assets that fall outside the EU financial services legislation. The following questions seek views from stakeholders to determine whether a bespoke regime on crypto-assets at EU level could be conducive to a thriving crypto-asset market in Europe and on how to frame a proportionate and balanced regulatory framework, in order support legal certainty and thus innovation while reducing the related key risks. To reap the full benefits of crypto-assets, additional modifications of national legislation may be needed to ensure, for instance, the enforceability of token transfers.

Question 14. In your view, would a bespoke regime for crypto-assets (that are not currently covered by EU financial services legislation) enable a sustainable crypto-asset ecosystem in the EU (that could otherwise not emerge)?

- ○ Yes
- ● No
- ○ Don't know / no opinion / not relevant

14.1 Please explain your reasoning for your answer to question 14:

> Otherwise a clustering of legal handling of crypto-assets within the EU/EEA is inevitable and no passporting of such otherwise global business models will be possible.
>
> The Liechtenstein Blockchain Act (TVTG) and the German regulation of crypto assets are examples of such isolated solutions, which may work within Liechtenstein and Germany but which are not passportable to other EU/EEA member states.

Question 15. What is your experience (if any) as regards national regimes on crypto-assets?

Please indicate which measures in these national laws are, in your view, an effective approach to crypto-assets regulation, which ones rather not.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> For Liechtenstein: The Liechtenstein Token and Trusted Technologies Act (Gesetz über Token und vertrauenswürdige Technologie-Dienstleister; also dubbed "Blockchain Act") which was enacted on January 01, 2020 stipulates various service provider roles with regard to blockchain/crypto-based businesses which have to register with the national supervisory authority (Liechtenstein Financial Market Authority) and are subject to the Liechtenstein Due Diligence Act (national implementation of the 4th Anti-Money-Laundering Directive as well as part of the 5th Directive).
> While the general idea to provide investor protection as well as entrepreneurial legal certainty is most welcome, the initial idea was to foster fintech start-ups. With minimum capital requirements, supervisory fees and other regulation similar to those of Payment Service Institutions, this goal seems to have been missed, given that the latter institutions are prudentially supervised by the competent national supervisory authority, while crypto-based startups subject to the Liechtenstein Blockchain Act are not prudentially supervised. The Liechtenstein Blockchain Act is split in two parts and deals with the civil law aspects regarding the transfer of tokens (e.g. dematerialized (financial) instruments or value rights) on the one hand and with supervisory aspects dealing with the regulation of such service providers on the other hand. Union Law usually only harmonizes supervisory law and does - at least not extensively - interfere with civil law, which should be pointed out when it comes to a bespoke regime for crypto-assets on a Union wide level (EU single market).
>
> For Germany: In Germany crypto assets and crypto custody Services are regulated from this year. The overall acceptance of the German market is positive. However, there are still some issues: no guidance on the new regulation and the Compliance Topics in relating to crypto assets Services. No EU-harmonized Approach (e.g. no passporting). Only regulatory regime, no civil law regime available yet.
>
> For Romania: lack of regulations or flawed and non-standardized application of current legislation led to jurisdiction shopping and increased costs for starting a business for innovative startups that would otherwise operate from the country of origin

Question 16. In your view, how would it be possible to ensure that a bespoke regime for crypto-assets and crypto-asset service providers is proportionate

to induce innovation, while protecting users of crypto-assets?

Please indicate if such a bespoke regime should include the above-mentioned categories (payment, investment and utility tokens) or exclude some of them, given their specific features (e.g. utility tokens).

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Defining payment, investment and utility tokens on a statutory level probably is not recommendable as the various instruments are already (partially) covered by existing regulationg (e.g. a token representing a financial instrument or a token representing e-money). Such definitions also run the risk of being bypassed or becoming obsolete by technological advancement.
> It seems more sensible to regulate the actual service providers dealing with crypto-assets in particular with regard to KYC/AML/CFT. It should however be considered that tokens may also merely represent commodities (absolute rights/property rights like title/ownership of chattel and not rights pursuant to the law of obligations) when considering a bespoke regulation for crypto-assets.
> As mentioned above, the Liechtenstein example, while generally being a welcoming all-encompassing regulation of a token/crypot-asset-economy as a whole, seems to have some disproportionate shortcomings when it comes to minimum capital requirements of service providers with regard to crypto-based business models as well as supervisory fees which are comparable to Payment Service Providers/Payment Institutions - which are however prudentially supervised and do not just have to register with the national supervisory authority; this regulation seems exuberant and in fact deter innovation.

Question 17. Do you think that the use of crypto-assets in the EU would be facilitated by greater clarity as to the prudential treatment of financial institutions' exposures to crypto-assets (See the discussion paper of the Basel Committee on Banking Supervision (BCBS))?

- ⦿ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

If you answered yes to question 17, please indicate how this clarity should be provided (guidance, EU legislation, ...):

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Clarity should e.g. be provided concerning the question whether or not regulated financial institutions may also conduct business with regard to (potentially unregulated) crypto-assets. For example: is it possible for an E-Money-Institution to also exchange crypto-assets and if so what additional regulation will apply, if any; or can regulated trading venues/trading facilities (e.g. regulated market, MTF, OTF but also SI or Market Makers) match interests with regard to (tokenized) financial instruments (or conduct trades with regard to such instruments) while also operating a similar platform with regard to crypto-assets which do not represent financial instruments.

Widespread implementation and acceptance with regard to crypto-assets naturally depends on the legal certainty surrounding this topic.

17.1 Please explain your reasoning for your answer to question 17:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 18. Should harmonisation of national civil laws be considered to provide clarity on the legal validity of token transfers and the tokenisation of tangible (material) assets?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

We do not believe a civil law harmonization can be achieved due to the intricacies of national bodies of law within the EU/EEA, although it would probably come with certain advantages and legal certainty with regard to passporting etc:

In terms of legal certainty on the European Single Market and a functioning passporting system with regard to a bespoke regime on crypto-assets a harmonised civil law seems in general advisable as mentioned above; however as this would mostly affect the respective national securities law such harmonisation might be prone to fail due to its comprehensive nature as this will undoubtedly affect the respective national law of title / proprietory rights as well as touch the fundamental question of which legal doctrine shall apply in a nations legal body (e.g. the abstraction principle or the principle of causality, which are mutually exclusive). Therefore, harmonisation of national civil laws has to be considered very carefully and is probably not feasible.

B. Specific questions on service providers related to crypto-assets

The crypto-asset market encompasses a range of activities and different market actors that provide trading and/or intermediation services. Currently, many of these activities and service providers are not subject to any regulatory

framework, either at EU level (except for AML/CFT purposes) or national level. Regulation may be necessary in order to provide clear conditions governing the provisions of these services and address the related risks in an effective and proportionate manner. This would enable the development of a sustainable crypto-asset framework. This could be done by bringing these activities and service providers in the regulated space by creating a new bespoke regulatory approach.

Question 19. Can you indicate the various types and the number of service providers related to crypto-assets (issuances of crypto-assets, exchanges, trading platforms, wallet providers, ...) in your jurisdiction?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> For Germany:
> We are currently differentiating between Crypto Custody Services and other Crypto Assets related services already known under MiFID II (however, given that in Germany basically any crypto asset falls under the financial instruments definition). Crypto Custody Services cover all kind of Wallet Provider Services, where the private keys are held for third parties (in hot or cold storage). Other Crypto Assets related services are mostly trading or brokerage services (e.g. crypto exchanges), including ancillary services provided by the service provider such as "staking".
> First specialized auditors for smart contracts are emerging.

1. Issuance of crypto-assets

This section distinguishes between the issuers of crypto-assets in general (1.1.) and the issuer of the so-called "stablecoins" backed by a reserve of real assets (1.2.).

1.1. Issuance of crypto-assets in general

The crypto-asset issuer or sponsor is the organisation that has typically developed the technical specifications of a crypto-asset and set its features. In some cases, their identity is known, while in some cases, those promoters are unidentified. Some remain involved in maintaining and improving the crypto-asset's code and underlying algorithm while other do not (study from the European Parliament on "Cryptocurrencies and Blockchain", July 2018). Furthermore, the issuance of crypto-assets is generally accompanied with a document describing crypto-asset and the ecosystem around it, the so-called 'white papers'. Those 'white papers' are, however, not standardised and the quality, the transparency and disclosure of risks vary greatly. It is therefore uncertain whether investors or consumers who buy crypto-assets understand the nature of the crypto-assets, the rights associated with them and the risks they present.

Question 20. Do you consider that the issuer or sponsor of crypto-assets marketed to EU investors/consumers should be established or have a physical presence in the EU?

- ◉ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

20.1 Please explain your reasoning for your answer to question 20:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

In general yes. However, it should be considered, that an E-Money-Institution (EMI) which has its registered office in a third country, will still be regulated as an EMI if it issues e-money (e.g. in the form of a stablecoin) in the EU/EEA.

Question 21. Should an issuer or a sponsor of crypto-assets be required to provide information (e.g. through a 'white paper') when issuing crypto-assets?

- ● Yes
- ○ No
- ○ This depends on the nature of the crypto-asset (utility token, payment token, hybrid token, ...)
- ○ Don't know / no opinion / not relevant

Question 21.1 Please indicate the entity that, in your view, should be responsible for this disclosure (e.g. the issuer/sponsor, the entity placing the crypto-assets in the market) and the content of such information (e.g. information on the crypto-asset issuer, the project, the rights attached to the crypto-assets, on the secondary trading, the underlying technology, potential conflicts of interest, ...):

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Any entity entering legal relationships with regard to crypto-assets with non-professional investors (all of the above mentioned information in brackets).

Note (also for Q 22 and 23): not all crypto-assets have centralized issuers, hence a different regulatory approach in such cases would be necessary.

If the crypto-asset is somehow controlled by smart contracts, there should be a description and / or audit of this, too (as basically the one in control of the smart contract controls the tokens, depending on how the contract was built).

Question 22. If a requirement to provide the information on the offers of crypto-assets is imposed on their issuer/sponsor, would you see a need to clarify the interaction with existing pieces of legislation that lay down information requirements (to the extent that those rules apply to the offers of certain crypto-assets, such as utility and/or payment tokens)?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
The Consumer Rights Directive	○	○	○	◉	○	○
The E-Commerce Directive	○	◉	○	○	○	○
The EU Distance Marketing of Consumer Financial Services Directive	○	○	○	◉	○	○

22.1 Is there any other existing piece of legislation laying down information requirements with which the interaction would need to be clarified? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

PSD II

22.2 Please explain your reasoning and indicate the type of clarification (legislative/non legislative) that would be required:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 23. Beyond any potential obligation as regards the mandatory incorporation and the disclosure of information on the offer, should the crypto-asset issuer or sponsor be subject to other requirements?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
The managers of the issuer or sponsor should be subject to fitness and probity standards	○	●	○	○	○	○
The issuer or sponsor should be subject to advertising rules to avoid misleading marketing/promotions	○	○	○	●	○	○
Where necessary, the issuer or sponsor should put in place a mechanism to safeguard the funds collected such as an escrow account or trust account	○	○	○	●	○	○

23.1 Is there any other requirement not mentioned above to which the crypto-asset issuer should be subject? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> As the smart contract basically "governs" everything that can be done "with" the tokens (like minting (produce more) or burning (destroy) or force transferring), it could be helpful in terms of investor protection if there also would be certain voluntary checks in place (i. e. audits)

23.2 Please explain your reasoning for your answers to question 23:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

1.2. Issuance of "stablecoins" backed by real assets

As indicated above, a new subset of crypto-assets – the so-called "stablecoins" – has recently emerged and present some opportunities in terms of cheap, faster and more efficient payments. A recent G7 report makes a distinction between "stablecoins" and "global stablecoins". While "stablecoins" share many features of crypto-assets, the so-called "global stablecoins" (built on existing large and cross-border customer base) could scale rapidly, which could lead to additional risks in terms of financial stability, monetary policy transmission and monetary sovereignty. As a consequence, this section of the public consultation aims to determine whether additional requirements should be imposed on both "stablecoin" and "global stablecoin" issuers when their coins are backed by real assets or funds. The reserve (i.e. the pool of assets put aside by the issuer to stabilise the value of a "stablecoin") may be subject to risks. For instance, the funds of the reserve may be invested in assets that may prove to be riskier or less liquid than expected in stressed market circumstances. If the number of "stablecoins" is issued above the funds held in the reserve, this could lead to a run (a large number of users converting their "stablecoins" into fiat currency).

Question 24. In your opinion, what would be the objective criteria allowing for a distinction between "stablecoins" and "global stablecoins" (e.g. number and value of "stablecoins" in circulation, size of the reserve, ...)? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> One differentiator could be a quantitative analysis: eg.g. Global stablecoins - which are being used /marketed in more or at least 3 different monetary systems (eg EU - EUR/US/CAD).
>
> But we also believe that additional regulatory obligations should apply to those entities who have large international user bases and decide to support certain stablecoins.

Question 25.1 To tackle the specific risks created by "stablecoins" and "global stablecoins", what are the requirements that could be imposed on their issuers and/or the manager of the reserve?

Please indicate for "stablecoins" if each is proposal is relevant.

	Relevant	Not relevant	Don't know / no opinion
The reserve of assets should only be invested in safe and liquid assets (such as fiat-currency, short term-government bonds, ...)	⊙	⦿	⊙

	Relevant	Not relevant	Don't know / no opinion
The issuer should contain the creation of "stablecoins" so that it is always lower or equal to the value of the funds of the reserve		●	
The assets or funds of the reserve should be segregated from the issuer's balance sheet	●		
The assets of the reserve should not be encumbered (i.e. not pledged as collateral)	●		
The issuer of the reserve should be subject to prudential requirements rules (including capital requirements)	●		
The issuer and the reserve should be subject to specific requirements in case of insolvency or when it decides to stop operating	●		
Obligation for the assets or funds to be held in custody with credit institutions in the EU	●		
Periodic independent auditing of the assets or funds held in the reserve	●		
The issuer should disclose information to the users on (i) how it intends to provide stability to the "stablecoins", (ii) on the claim (or the absence of claim) that users may have on the reserve, (iii) on the underlying assets or funds placed in the reserve	●		
The value of the funds or assets held in the reserve and the number of stablecoins should be disclosed periodically	●		
Requirements to ensure interoperability across different distributed ledgers or enable access to the technical standards used by the issuer		●	

Question 25.1 To tackle the specific risks created by "stablecoins" and "global stablecoins", what are the requirements that could be imposed on their issuers and/or the manager of the reserve?

Please indicate for "stablecoins" if each is proposal is relevant.

	Relevant	Not relevant	Don't know / no opinion
The reserve of assets should only be invested in safe and liquid assets (such as fiat-currency, short term-government bonds, ...)	●		
The issuer should contain the creation of "stablecoins" so that it is always lower or equal to the value of the funds of the reserve	●		

The assets or funds of the reserve should be segregated from the issuer's balance sheet	●	○	○
The assets of the reserve should not be encumbered (i.e. not pledged as collateral)	●	○	○
The issuer of the reserve should be subject to prudential requirements rules (including capital requirements)	●	○	○
The issuer and the reserve should be subject to specific requirements in case of insolvency or when it decides to stop operating	●	○	○
Obligation for the assets or funds to be held in custody with credit institutions in the EU	○	●	○
Obligation for the assets or funds to be held for safekeeping at the central bank	○	●	○
Periodic independent auditing of the assets or funds held in the reserve	●	○	○
The issuer should disclose information to the users on (i) how it intends to provide stability to the "stablecoins", (ii) on the claim (or the absence of claim) that users may have on the reserve, (iii) on the underlying assets or funds placed in the reserve	●	○	○
The value of the funds or assets held in the reserve and the number of stablecoins should be disclosed periodically	●	○	○
Obligation for the issuer to use open source standards to promote competition	○	●	○

25.1 a) Is there any other requirements not mentioned above that could be imposed on "stablecoins" issuers and/or the manager of the reserve? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

25.1 b) Please Please illustrate your responses to question 25.1:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 25.2 To tackle the specific risks created by "stablecoins" and "global stablecoins", what are the requirements that could be imposed on their issuers and/or the manager of the reserve?

Please indicate for "global stablecoins" if each is proposal is relevant.

	Relevant	Not relevant	Don't know / no opinion
The reserve of assets should only be invested in safe and liquid assets (such as fiat-currency, short term-government bonds, ...)	●	○	○
The issuer should contain the creation of "stablecoins" so that it is always lower or equal to the value of the funds of the reserve	●	○	○

The value of the funds or assets held in the reserve and the number of stablecoins should be disclosed periodically	●	○	○

25.2 a) Is there any other requirements not mentioned above that could be imposed on "stablecoins" issuers and/or the manager of the reserve? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

25.2 b) Please Please illustrate your responses to question 25.2:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

"Stablecoins" could be used by anyone (retail or general purpose) or only by a limited set of actors, i.e. financial institutions or selected clients of financial institutions (wholesale). The scope of uptake may give rise to different risks. The G7 report on "investigating the impact of global stablecoins" stresses that "*Retail stablecoins, given their public nature, likely use for high-volume, small-value payments and potentially high adoption rate, may give rise to different risks than wholesale stablecoins available to a restricted group of users*".

Question 26. Do you consider that wholesale "stablecoins" (those limited to financial institutions or selected clients of financial institutions, as opposed to retail investors or consumers) should receive a different regulatory treatment than retail "stablecoins"?

- ◉ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

26.1 Please explain your reasoning for your answer to question 26:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes - similar to bond issuances type of regime

2. Trading platforms

Trading platforms function as a market place bringing together different crypto-asset users that are either looking to buy or sell crypto-assets. Trading platforms match buyers and sellers directly or through an intermediary. The business model, the range of services offered and the level of sophistication vary across platforms. Some platforms, so-called 'centralised platforms', hold crypto-assets on behalf of their clients while others, so-called decentralised platforms, do not. Another important distinction between centralised and decentralised platforms is that trade settlement typically occurs on the books of the platform (off-chain) in the case of centralised platforms, while it occurs on DLT for decentralised platforms (on-chain). Some platforms have already adopted good practice from traditional securities trading venues[19] while others use simple and inexpensive technology.

---

[19] Trading venues are a regulated market, a multilateral trading facility or an organised trading facility under MiFID II

Question 27. In your opinion and beyond market integrity risks (see section III. C. 1. below), what are the main risks in relation to trading platforms of crypto-assets?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Absence of accountable entity in the EU	○	●	○	○	○	○
Lack of adequate governance arrangements, including operational resilience and ICT security	○	○	○	●	○	○
Absence or inadequate segregation of assets held on the behalf of clients (e.g. for 'centralised platforms')	○	○	●	○	○	○
Conflicts of interest arising from other activities	○	○	●	○	○	○
Absence/inadequate recordkeeping of transactions	○	●	○	○	○	○
Absence/inadequate complaints or redress procedures are in place	○	○	●	○	○	○
Bankruptcy of the trading platform	○	○	○	○	●	○
Lacks of resources to effectively conduct its activities	○	●	○	○	○	○

Risk	1	2	3	4	5	6
Losses of users' crypto-assets through theft or hacking (cyber risks)	○	○	○	○	◉	○
Lack of procedures to ensure fair and orderly trading	○	◉	○	○	○	○
Access to the trading platform is not provided in an undiscriminating way	◉	○	○	○	○	○
Delays in the processing of transactions	◉	○	○	○	○	○
For centralised platforms: Transaction settlement happens in the book of the platform and not necessarily recorded on DLT. In those cases, confirmation that the transfer of ownership is complete lies with the platform only (counterparty risk for investors vis-à-vis the platform)	○	○	◉	○	○	○
Lack of rules, surveillance and enforcement mechanisms to deter potential market abuse	○	○	◉	○	○	○

27.1 Is there any other main risks posed by trading platforms of crypto-assets not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

27.2 Please explain your reasoning for your answer to question 27:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 28. What are the requirements that could be imposed on trading platforms in order to mitigate those risks?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Trading platforms should have a physical presence in the EU	○	●	○	○	○	○
Trading platforms should be subject to governance arrangements (e.g. in terms of operational resilience and ICT security)	○	○	○	○	●	○
Trading platforms should segregate the assets of users from those held on own account	○	●	○	○	○	○
Trading platforms should be subject to rules on conflicts of interest	○	○	○	●	○	○
Trading platforms should be required to keep appropriate records of users' transactions	○	○	●	○	○	○
Trading platforms should have an adequate complaints handling and redress procedures	○	○	●	○	○	○
Trading platforms should be subject to prudential requirements (including capital requirements)	○	○	●	○	○	○
Trading platforms should have adequate rules to ensure fair and orderly trading	○	○	●	○	○	○
Trading platforms should provide access to its services in an undiscriminating way	○	●	○	○	○	○
Trading platforms should have adequate rules, surveillance and enforcement mechanisms to deter potential market abuse	○	○	○	●	○	○
Trading platforms should be subject to reporting requirements (beyond AML/CFT requirements)	○	●	○	○	○	○

				●			
Trading platforms should be responsible for screening crypto-assets against the risk of fraud	○	○	●	○	○	○

28.1 Is there any other requirement that could be imposed on trading platforms in order to mitigate those risks? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

28.2 Please indicate if those requirements should be different depending on the type of crypto-assets traded on the platform and explain your reasoning for your answers to question 28:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

3. Exchanges (fiat-to-crypto and crypto-to-crypto)

Crypto-asset exchanges are entities that offer exchange services to crypto-asset users, usually against payment of a certain fee (i.e. a commission). By providing broker/dealer services, they allow users to sell their crypto-assets for fiat currency or buy new crypto-assets with fiat currency. It is important to note that some exchanges are pure crypto-to-crypto exchanges, which means that they only accept payments in other crypto-assets (for instance, Bitcoin). It should also be noted that many cryptocurrency exchanges (i.e. both fiat-to-crypto and crypto-to-crypto exchanges) operate as custodial wallet providers (see section III.B.4 below). Many exchanges usually function both as a trading platform and as a form of exchange (study from the European Parliament on "Cryptocurrencies and Blockchain", July 2018).

Question 29. In your opinion, what are the main risks in relation to crypto-to-crypto and fiat–to-crypto exchanges?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

						Don't know /

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	no opinion / not relevant
Absence of accountable entity in the EU	○	●	○	○	○	○
Lack of adequate governance arrangements, including operational resilience and ICT security	○	○	○	●	○	○
Conflicts of interest arising from other activities	○	●	○	○	○	○
Absence/inadequate recordkeeping of transactions	○	○	●	○	○	○
Absence/inadequate complaints or redress procedures are in place	○	○	●	○	○	○
Bankruptcy of the exchange	○	○	○	○	●	○
Inadequate own funds to repay the consumers	○	○	○	○	●	○
Losses of users' crypto-assets through theft or hacking	○	○	○	○	●	○
Users suffer loss when the exchange they interact with does not exchange crypto-assets against fiat currency (conversion risk)	○	●	○	○	○	○
Absence of transparent information on the crypto-assets proposed for exchange	○	●	○	○	○	○

29.1 Is there any other main risks in relation to crypto-to-crypto and fiat–to-crypto exchanges not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

29.2 Please explain your reasoning for your answer to question 29:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 30. What are the requirements that could be imposed on exchanges in order to mitigate those risks?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Absence of accountable entity in the EU	○	●	○	○	○	○
Exchanges should be subject to governance arrangements (e.g. in terms of operational resilience and ICT security)	○	○	○	●	○	○
Exchanges should segregate the assets of users from those held on own account	○	○	●	○	○	○
Exchanges should be subject to rules on conflicts of interest	○	○	○	○	●	○
Exchanges should be required to keep appropriate records of users' transactions	○	○	●	○	○	○
Exchanges should have an adequate complaints handling and redress procedures	○	●	○	○	○	○
Exchanges should be subject to prudential requirements (including capital requirements)	○	○	●	○	○	○
Exchanges should be subject to advertising rules to avoid misleading marketing/promotions	○	○	●	○	○	○

Exchanges should be subject to reporting requirements (beyond AML/CFT requirements)	⊙	⊙	⦿	⊙	⊙	⊙
Exchanges should be responsible for screening crypto-assets against the risk of fraud	⊙	⊙	⦿	⊙	⊙	⊙

30.1 Is there any other requirement that could be imposed exchanges in order to mitigate those risks? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

30.2 Please indicate if those requirements should be different depending on the type of crypto-assets available on the exchange and explain your reasoning for your answers to question 30:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

4. Provision of custodial wallet services for crypto-assets

Crypto-asset wallets are used to store public and private keys[20] and to interact with DLT to allow users to send and receive crypto-assets and monitor their balances. Crypto-asset wallets come in different forms. Some support multiple crypto-assets/DLTs while others are crypto-asset/DLT specific[21]. DLT networks generally provide their own wallet functions (e.g. Bitcoin or Ether).

There are also specialised wallet providers. Some wallet providers, so-called custodial wallet providers, not only provide wallets to their clients but also hold their crypto-assets (i.e. their private keys) on their behalf. They can also provide an overview of the customers' transactions. Different risks can arise from the provision of such a service.

----

[20] DLT is built upon a cryptography system that uses pairs of keys: public keys, which are publicly known and essential for identification, and private keys, which are kept secret and are used for authentication and encryption.

[21] There are software/hardware wallets and so-called cold/hot wallets. A software wallet is an application that may be installed locally (on a computer or a smart phone) or run in the cloud. A hardware wallet is a physical device, such as a USB key. Hot wallets are connected to the internet while cold wallets are not.

Question 31. In your opinion, what are the main risks in relation to the custodial wallet service provision?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
No physical presence in the EU	○	○	○	◉	○	○
Lack of adequate governance arrangements, including operational resilience and ICT security	○	○	○	◉	○	○
Absence or inadequate segregation of assets held on the behalf of clients	○	○	○	○	◉	○
Conflicts of interest arising from other activities (trading, exchange)	○	○	◉	○	○	○
Absence/inadequate recordkeeping of holdings and transactions made on behalf of users	○	○	◉	○	○	○
Absence/inadequate complaints or redress procedures are in place	○	○	◉	○	○	○
Bankruptcy of the custodial wallet provider	○	○	○	◉	○	○
Inadequate own funds to repay the consumers	○	◉	○	○	○	○
Losses of users' crypto-assets/private keys (e.g. through wallet theft or hacking)	○	○	◉	○	○	○
The custodial wallet is compromised or fails to provide expected functionality	○	○	◉	○	○	○
The custodial wallet provider behaves negligently or fraudulently	○	○	○	◉	○	○
No contractual binding terms and provisions with the user who holds the wallet	○	○	◉	○	○	○

31.1 Is there any other risk in relation to the custodial wallet service provision not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> No onboarding of clients (inlc. no UBO checks) and no trace of origin of funds. No clear separation of duties when acting together with other crypto service providers (e.g. crypto traders or exchanges).

31.2 Please explain your reasoning for your answer to question 31:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> In practice (even though AMLD4 is implemented in most EU member states) many new obliged entities do not understand their AML duties and when to comply with AMLD5. This becomes critical, when several crypto service providers act together and the separation of duties is not clear.

Question 32. What are the requirements that could be imposed on custodial wallet providers in order to mitigate those risks?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Custodial wallet providers should have a physical presence in the EU	○	○	○	●	○	○
Custodial wallet providers should be subject to governance arrangements (e.g. in terms of operational resilience and ICT security)	○	○	○	●	○	○

Statement	1	2	3	4	5	6
Custodial wallet providers should segregate the asset of users from those held on own account	○	○	○	○	●	○
Custodial wallet providers should be subject to rules on conflicts of interest	○	○	○	●	○	○
Custodial wallet providers should be required to keep appropriate records of users' holdings and transactions	○	○	○	●	○	○
Custodial wallet providers should have an adequate complaints handling and redress procedures	○	○	●	○	○	○
Custodial wallet providers should be subject to capital requirements	○	○	○	●	○	○
Custodial wallet providers should be subject to advertising rules to avoid misleading marketing/promotions	○	○	●	○	○	○
Custodial wallet providers should be subject to certain minimum conditions for their contractual relationship with the consumers/investors	○	○	○	○	○	○

32.1 Is there any other requirement that could be imposed on custodial wallet providers in order to mitigate those risks? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

They should stick to AMLD duties and have an audit of their AMLD policies and procedures prior to start of their business.
Furthermore, on-chain analysis tools could be made mandatory in order to control the flow of funds and discover potential fraudulent/non-legal transactions.
Also, smart contract auditors might be subject to regulation, given the fact that a mistake on their side could impose significant losses to the customers.

32.2 Please indicate if those requirements should be different depending on the type of crypto-assets kept in custody by the custodial wallet provider and explain your reasoning for your answer to question 32:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. Different token (utility versus payment versus security) require different requirements.

Question 33. Should custodial wallet providers be authorised to ensure the custody of all crypto-assets, including those that qualify as financial instruments under MiFID II (the so-called 'security tokens', see section IV of the public consultation) and those currently falling outside the scope of EU legislation?

- ⦿ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

33.1 Please explain your reasoning for your answer to question 33:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> We believe the current German regulator regime for crypto custody reflected in implementation of AMLD5 would be adequate at this point. Namely, separate/additional license shall be required for entities that provide custodian services with respect to crypto-assets that qualify as financial instruments(transferable securities under MiFID II) in addition to custodian services related to crypto-assets that do not qualify as such. This way custodial wallet providers not engaging in provision of custodian services related to MiFID II fin.instruments can remain subject to less strict requirements

Question 34. In your opinion, are there certain business models or activities /services in relation to digital wallets (beyond custodial wallet providers) that should be in the regulated space?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. In fact any business which may put customer assets at risk. For instance: Staking business is currently not regulated. It goes beyond custody and puts client assets at risk (similar to deposit business). Hence, a "staking"protection scheme would be necessary (similar to "deposit protection scheme"). In that context we believe that regulating custodial and intermediation services related to staking may be a practical approach . However, regulating staking itself is not needed.

5. Other services providers

Beyond custodial wallet providers, exchanges and trading platforms, other actors play a particular role in the crypto-asset ecosystem. Some bespoke national regimes on crypto-currency regulate (either on an optional or mandatory basis) other crypto-assets related services, sometimes taking examples of the investment services listed in Annex I of MiFID II. The following section aims at assessing whether some requirements should be required for other services.

Question 35. In your view, what are the services related to crypto-assets that should be subject to requirements?

(When referring to execution of orders on behalf of clients, portfolio management, investment advice, underwriting on a firm commitment basis, placing on a firm commitment basis, placing without firm commitment basis, we consider services that are similar to those regulated by Annex I A of MiFID II.)

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Reception and transmission of orders in relation to crypto-assets	○	●	○	○	○	○
Execution of orders on crypto-assets on behalf of clients	○	○	●	○	○	○
Crypto-assets portfolio management	○	○	○	●	○	○
Advice on the acquisition of crypto-assets	○	●	○	○	○	○
Underwriting of crypto-assets on a firm commitment basis	○	○	●	○	○	○
Placing crypto-assets on a firm commitment basis	○	○	●	○	○	○
Placing crypto-assets without a firm commitment basis	○	○	●	○	○	○
Information services (an information provider can make available information on exchange rates, news feeds and other data related to crypto-assets)	●	○	○	○	○	○

Service	1	2	3	4	5	6
Processing services, also known as 'mining' or 'validating' services in a DLT environment (e.g. 'miners' or validating 'nodes' constantly work on verifying and confirming transactions)	●	○	○	○	○	○
Distribution of crypto-assets (some crypto-assets arrangements rely on designated dealers or authorised resellers)	○	●	○	○	○	○
Services provided by developers that are responsible for maintaining/updating the underlying protocol	●	○	○	○	○	○
Agent of an issuer (acting as liaison between the issuer and to ensure that the regulatory requirements are complied with)	○	○	●	○	○	○

35.1 Is there any other services related to crypto-assets not mentioned above that should be subject to requirements? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

See our answer to Q 34.

35.2 Please illustrate your response to question 35 by underlining the potential risks raised by these services if they were left unregulated and by identifying potential requirements for those service providers:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Crypto-assets are not banknotes, coins or scriptural money. For this reason, crypto-assets do not fall within the definition of 'funds' set out in the Payment Services Directive (PSD2), unless they qualify as electronic money. As a consequence, if a firm proposes a payment service related to a crypto-asset (that do not qualify as e-money), it would fall outside the scope of PSD2.

Question 36. Should the activity of making payment transactions with crypto-assets (those which do not qualify as e-money) be subject to the same or equivalent rules as those currently contained in PSD2?

- ○ Yes
- ● No
- ○ Don't know / no opinion / not relevant

36.1 Please explain your reasoning for your answer to question 36:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> The payment transaction market with crypto is far from maturity - new forms of collaboration, ecosystem for transferringtransfering value are being created. Over regulation might be a significant factor for hindering innovation at EU level.

C. Horizontal questions

Those horizontal questions relate to four different topics: Market integrity (1.), AML/CFT (2.), consumer protection (3.) and the supervision and oversight of the various service providers related to crypto-assets (4.).

1. Market Integrity

Many crypto-assets exhibit high price and volume volatility while lacking the transparency and supervision and oversight present in other financial markets. This may heighten the potential risk of market manipulation and insider dealing on exchanges and trading platforms. These issues can be further exacerbated by trading platforms not having adequate systems and controls to ensure fair and orderly trading and protect against market manipulation and insider dealing. Finally there may be a lack of information about the identity of participants and their trading activity in some crypto-assets.

Question 37. In your opinion, what are the biggest market integrity risks related to the trading of crypto-assets?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Price manipulation	○	○	○	●	○	○

Volume manipulation (wash trades…)	○	○	○	◉	○	○
Pump and dump schemes	○	○	○	○	◉	○
Manipulation on basis of quoting and cancellations	○	○	○	◉	○	○
Dissemination of misleading information by the crypto-asset issuer or any other market participants	○	○	◉	○	○	○
Insider dealings	○	○	○	○	◉	○

37.1 Is there any other big market integrity risk related to the trading of crypto-assets not mentioned above that you would foresee? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

37.2 Please explain your reasoning for your answer to question 37:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

While market integrity is the key foundation to create consumers' confidence in the crypto-assets market, the extension of the Market Abuse Regulation (MAR) requirements to the crypto-asset ecosystem could unduly restrict the development of this sector.

Question 38. In your view, how should market integrity on crypto-asset markets be ensured?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Analogues application of the Market Abuse Regulation and Directive.

While the information on executed transactions and/or current balance of wallets are often openly accessible in distributed ledger based crypto-assets, there is currently no binding requirement at EU level that would allow EU supervisors to directly identify the transacting counterparties (i.e. the identity of the legal or natural person(s) who engaged in the transaction).

Question 39. Do you see the need for supervisors to be able to formally identify the parties to transactions in crypto-assets?

- ● Yes
- ◉ No
- ◉ Don't know / no opinion / not relevant

If you see the need for supervisors to be able to formally identify the parties to transactions in crypto-assets, please explain explain how you would see this best achieved in practice:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Provided that NCAs are not able to identify crypto-market participants involved in certain transactions with crypto-assets, there is no way to enforce any existing or future regulatory framework on prevention and detection of market abuse.

39.1 Please explain your reasoning for your answer to question 39:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 40. Provided that there are new legislative requirements to ensure the proper identification of transacting parties in crypto-assets, how can it be

ensured that these requirements are not circumvented by trading on platforms/exchanges in third countries?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Similar as we have it currently with the Market Abuse Regulation and Directive.

2. Anti-Money Laundering (AML)/Countering the Financing of Terrorism (CFT)

Under the current EU anti-money laundering and countering the financing of terrorism (AML/CFT) legal framework (Anti-Money Laundering Directive (Directive 2015/849/EU) as amended by AMLD5 (Directive 2018/843/EU)), providers of services (wallet providers and crypto-to-fiat exchanges) related to "virtual currency" are "obliged entities". A virtual currency is defined as: "*a digital representation of value that is neither issued by a central bank or a public authority, nor necessarily attached to a fiat currency, but is accepted by natural or legal persons as a means of payment and can be transferred, stored or traded electronically*". The Financial Action Task Force (FATF) uses a broader term "*virtual asset*" and defines it as: "*a digital representation of value that can be digitally traded or transferred, and can be used for payment or investment purposes, and that does not include digital representations of fiat currencies, securities and other financial assets that are already covered elsewhere in the FATF Recommendations*". Therefore, there may be a need to align the definition used in the EU AML/CFT framework with the FATF recommendation or with a "crypto-asset" definition, especially if a crypto-asset framework was needed.

Question 41. Do you consider it appropriate to extend the existing "virtual currency" definition in the EU AML/CFT legal framework in order to align it with a broader definition (as the one provided by the FATF or as the definition of "crypto-assets" that could be used in a potential bespoke regulation on crypto-assets)?

- ○ Yes
- ◉ No
- ○ Don't know / no opinion / not relevant

41.1 Please explain your reasoning for your answer to question 41:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Some crypto-asset services are currently covered in internationally recognised recommendations without being covered under EU law, such as the provisions of exchange services between different types of crypto-assets (crypto-to-crypto exchanges) or the 'participation in and provision of financial services related to an issuer's offer and/or sale of virtual assets'. In addition, possible gaps may exist with regard to peer-to-peer

transactions between private persons not acting as a business, in particular when done through wallets that are not hosted by custodial wallet providers.

Some crypto-asset services are currently covered in internationally recognised recommendations without being covered under EU law, such as the provisions of exchange services between different types of crypto-assets (crypto-to-crypto exchanges) or the "*participation in and provision of financial services related to an issuer"s offer and/or sale of virtual assets*". In addition, possible gaps may exist with regard to peer-to-peer transactions between private persons not acting as a business, in particular when done through wallets that are not hosted by custodial wallet providers.

Question 42. Beyond fiat-to-crypto exchanges and wallet providers that are currently covered by the EU AML/CFT framework, are there crypto-asset services that should also be added to the EU AML/CFT legal framework obligations?

- ● Yes
- ◎ No
- ◎ Don't know / no opinion / not relevant

If you think there are crypto-asset services that should also be added to the EU AML/CFT legal framework obligations, describe the possible risks to tackle:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Mixer and Tumbler Services (if not already illegal) and crypto-to-crypto service providers.
>
> However, we believe that fully decentralized and permissionless smart contracts should not be regulated.

42.1 Please explain your reasoning for your answer to question 42:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> These service providers are use by market participants to laundry crypto.

Question 43. If a bespoke framework on crypto-assets is needed, do you consider that all crypto-asset service providers covered by this potential framework should become 'obliged entities' under the EU AML/CFT framework?

○ Yes
◉ No
○ Don't know / no opinion / not relevant

43.1 Please explain your reasoning for your answer to question 43:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

There are service providers who only act on their technical capability as to create, update blockchains. Also consulting firms providing advice on how crypto-asset based ecosystems could be created. These two types should not be regulated under AML/CFT. There might be scope to consider crypto-foundations as obliged entities in specific situations related to the type of tokens they administer, the geo-location of their members and type of projects financed within such foundations.

Question 44. In your view, how should the AML/CFT risks arising from peer-to-peer transactions (i.e. transactions without intermediation of a service provider) be mitigated?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

In order to tackle the dangers linked to anonymity, new FATF standards require that "countries should ensure that originating Virtual Assets Service Providers (VASP) obtain and hold required and accurate originator information and required beneficiary information on virtual asset transfers, submit the above information to the beneficiary VASP or financial institution (if any) immediately and securely, and make it available on request to appropriate authorities. Countries should also ensure that beneficiary VASPs obtain and hold required originator information and required and accurate beneficiary information on virtual asset transfers and make it available on request to appropriate authorities."

In order to tackle the dangers linked to anonymity, new FATF standards require that "*countries should ensure that originating Virtual Assets Service Providers (VASP) obtain and hold required and accurate originator information and required beneficiary information on virtual asset transfers, submit the above information to the beneficiary VASP or financial institution (if any) immediately and securely, and make it available on request to appropriate authorities. Countries should also ensure that beneficiary VASPs obtain and hold required originator information and required and accurate beneficiary information on virtual asset transfers and make it available on request to appropriate authorities*" (FATF Recommendations).

Question 45. Do you consider that these requirements should be introduced in the EU AML/CFT legal framework with additional details on their practical implementation?

○ Yes
◉ No

○ Don't know / no opinion / not relevant

45.1 Please explain your reasoning for your answer to question 45:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> There are contractual provisions between VASP providers and VASPs that should allocate risks of default, breaches of service quality etc. I fail to see where the additional reporting would help in full transparency on each transaction. Second, standardization or standards of quality for VASP providers could be useful and proposed - but the market should be the one championing such standards. Imposing additional requirements for VASP providers would equal to overburdening the creation and operation of new crypto ventures.

Question 46. In your view, do you consider relevant that the following requirements are imposed as conditions for the registration and licensing of providers of services related to crypto-assets included in section III. B?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Directors and senior management of such providers should be subject to fit and proper test from a money laundering point of view, meaning that they should not have any convictions or suspicions on money laundering and related offences	○	◉	○	○	○	○
Service providers must be able to demonstrate their ability to have all the controls in place in order to be able to comply with their obligations under the anti-money laundering framework	○	◉	○	○	○	○

46.1 Please explain your reasoning for your answer to question 46:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

3. Consumer/investor protection[21]

Information on the profile of crypto-asset investors and users is limited. Some estimates suggest however that the user base has expanded from the original tech-savvy community to a broader audience, including both retail and institutional investors[22]. Offerings of utility tokens, for instance, do not provide for minimum investment amounts nor are they necessarily limited to professional or sophisticated investors. When considering the consumer protection, the functions of the crypto-assets should also be taken into consideration. While some crypto-assets are bought for investment purposes, other are used as a means of payment or for accessing a specific product or service. Beyond the information that is usually provided by crypto-asset issuer or sponsors in their 'white papers', the question arises whether providers of services related to crypto-assets should carry out suitability checks depending on the riskiness of a crypto-asset (e.g. volatility, conversion risks, ...) relative to a consumer's risk appetite. Other approaches to protect consumers and investors could also include, among others, limits on maximum investable amounts by EU consumers or warnings on the risks posed by crypto-assets.

----

[21] The term 'consumer' or 'investor' are both used in this section, as the same type of crypto-assets can be bought for different purposes. For instance, payment tokens can be acquired to make payment transactions while they can also be held for investment, given their volatility. Likewise, utility tokens can be bought either for investment or for accessing a specific product or service.

[22] ESMA, "Advice on initial coin offerings and Crypto-Assets", January 2019.

Question 47. What type of consumer protection measures could be taken as regards crypto-assets?

Please rate from 1 (completely irrelevant) to 5 (highly relevant)

	1 (completely irrelevant)	2	3	4	5 (highly relevant)	Don't know / no opinion / not relevant
Information provided by the issuer of crypto-assets (the so-called 'white papers')	○	○	○	○	●	○
Limits on the investable amounts in crypto-assets by EU consumers	●	○	○	○	○	○
Suitability checks by the crypto-asset service providers (including exchanges, wallet providers, ...)	○	○	●	○	○	○

51

Warnings on the risks by the crypto-asset service providers (including exchanges, platforms, custodial wallet providers, ...)	◉	◉	◉	◉	◉ (selected)	◉

47.1 Is there any other type of consumer protection measures that could be taken as regards crypto-assets? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

As the smart contract governs tokens, we believe that it should also be looked at the smart contract and the capabilities that come with them. The customer should at any given time have the possibility to find out about the content of the smart contract in human readable form. If one wanted to even go one step further, one would specifically monitor these smart contracts and the actions within it and split certain actions into two parties (like in funds management industry)

47.2 Please explain your reasoning for your answer to question 47 and indicate if those requirements should apply to all types of crypto assets or only to some of them:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Financial literacy and appetite for risks are the cornerstone for consumer protection in financial markets. The crypto-assets bring an additional perspective - the understanding (at least at minimum) on digital aspects related to business models, crypto-assets per se and the main service providers for crypto assets. I would include measures in relation to consumer digital literacy assessment at the time a consumer invests in crypto assets.

Question 48. Should different standards of consumer/investor protection be applied to the various categories of crypto-assets depending on their prevalent economic (i.e. payment tokens, stablecoins, utility tokens, ...) or social function?

◉ Yes
◉ No
◉ Don't know / no opinion / not relevant

48.1 Please explain your reasoning for your answer to question 48:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes, higher standard in relation to stable coins and crypto - financial instruments

Before an actual ICO (i.e. a public sale of crypto-assets by means of mass distribution), some issuers may choose to undertake private offering of crypto-assets, usually with a discounted price (the so-called "private sale"), to a small number of identified parties, in most cases qualified or institutional investors (such as venture capital funds). Furthermore, some crypto-asset issuers or promoters distribute a limited number of crypto-assets free of charge or at a lower price to external contributors who are involved in the IT development of the project (the so-called "bounty") or who raise awareness of it among the general public (the so-called "air drop") (see Autorité des Marchés Financiers, French ICOs – A New Method of financing, November 2018).

Question 49. Should different standards in terms of consumer/investor protection be applied depending on whether the crypto-assets are bought in a public sale or in a private sale?

- ⦿ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

49.1 Please explain your reasoning for your answer to question 49:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Many national jurisdiction allow for lower standards of compliance (as to consumer protection in financial investments) in case the investors are from a close group (as the risk of scaling of scaling a scam is contained) - thus private sale should not be much affected by heightened standards.

Question 50. Should different standards in terms of consumer/investor protection be applied depending on whether the crypto-assets are obtained against payment or for free (e.g. air drops)?

- ⦿ Yes
- ○ No
- ○ Don't know / no opinion / not relevant

50.1 Please explain your reasoning for your answer to question 50:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> A different standard in relation to disclosure of funds offered in bounties and air drops should apply. Disclosure of such practices are related to marketing & advertising of a specific ICO/STO/IEO and the potential misleading information the consumer gets from promoters. This disclosure policy should not apply to the IT/core team who developed the product but only to public-facing roles at the time of raising funds.

The vast majority of crypto-assets that are accessible to EU consumers and investors are currently issued outside the EU (in 2018, for instance, only 10% of the crypto-assets were issued in the EU (mainly, UK, Estonia and Lithuania) – Source Satis Research). If an EU framework on the issuance and services related to crypto-assets is needed, the question arises on how those crypto-assets issued outside the EU should be treated in regulatory terms.

Question 51. In your opinion, how should the crypto-assets issued in third countries and that would not comply with EU requirements be treated?

Please rate from 1 (factor not relevant at all) to 5 (very relevant factor)

	1 (factor not relevant at all)	2	3	4	5 (very relevant factor)	Don't know / no opinion / not relevant
Those crypto-assets should be banned	●	○	○	○	○	○
Those crypto-assets should be still accessible to EU consumers/investors	○	○	●	○	○	○
Those crypto-assets should be still accessible to EU consumers/investors but accompanied by a warning that they do not necessarily comply with EU rules	○	○	○	●	○	○

51.1 Is there any other way the crypto-assets issued in third countries and that would not comply with EU requirements should be treated? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

51.2 Please explain your reasoning for your answer to question 51:

5000 character(s) maximum

---

4. Supervision and oversight of crypto-assets service providers

As a preliminary remark, it should be noted that where a crypto-asset arrangement, including "stablecoin" arrangements qualify as payment systems and/or scheme, the Eurosystem oversight frameworks may apply. In accordance with its mandate, the Eurosystem is looking to apply its oversight framework to innovative projects. As the payment landscape continues to evolve, the Eurosystem oversight frameworks for payments instruments, schemes and arrangements are currently reviewed with a view to closing any gaps that innovative solutions might create by applying a holistic, agile and functional approach. The European Central Bank and Eurosystem will do so in cooperation with other relevant European authorities. Furthermore, the Eurosystem supports the creation of cooperative oversight frameworks whenever a payment arrangement is relevant to multiple jurisdictions.

That being said, if a legislation on crypto-assets service providers at EU level is needed, a question arises on which supervisory authorities in the EU should ensure compliance with that regulation, including the licensing of those entities. As the size of the crypto-asset market is still small and does not at this juncture raise financial stability issues, the supervision of the service providers (that are still a nascent industry) by national competent authorities would be justified. At the same time, as some new initiatives (such as the "global stablecoin") through their global reach and can raise financial stability concerns at EU level, and as crypto-assets will be accessible through the internet to all consumers, investors and firms across the EU, it could be sensible to ensure an equally EU-wide supervisory perspective. This could be achieved, *inter alia*, by empowering the European Authorities (e.g. in cooperation with the European System of Central Banks) to supervise and oversee crypto-asset service providers. In any case, as the crypto-asset market rely on new technologies, EU regulators could face new challenges and require new supervisory and monitoring tools.

Question 52. Which, if any, crypto-asset service providers included in Section III. B do you think should be subject to supervisory coordination or supervision by the European Authorities (in cooperation with the ESCB where relevant)?
Please explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Crypto exchanges and crypto custody providers as well as smart contract auditors.

Question 53. Which are the tools that EU regulators would need to adequately supervise the crypto-asset service providers and their underlying technologies?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Same tools as currently used for traditional exchange and custody providers with a focus on IT Security.

IV. Crypto-assets that are currently covered by EU legislation

This last part of the public consultation consists of general questions on security tokens (A.), an assessment of legislation applying to security tokens (B.) and an assessment of legislation applying to e-money tokens (C.).

A. General questions on 'security tokens'

Introduction

For the purpose of this section, we use the term 'security tokens' to refer to crypto-assets issued on a DLT and that qualify as transferable securities or other types of MiFID financial instruments. By extension, activities concerning security tokens would qualify as MiFID investment services/activities and transactions in security tokens admitted to trading or traded on a trading venue[23] would be captured by MiFID provisions. Consequently, firms providing services concerning security tokens should ensure they have the relevant MiFID authorisations and that they follow the relevant rules and requirements. MiFID is a cornerstone of the EU regulatory framework as financial instruments covered by MiFID are also subject to other financial legislation such as CSDR or EMIR, which therefore equally apply to post-trade activities related to security tokens.

Building on ESMA's advice on crypto-assets and ICOs issued in January 2019 and on a preliminary legal assessment carried out by Commission services on the applicability and suitability of the existing EU legislation (mainly at level 1[24]) on trading, post-trading and other financial services concerning security tokens, such as asset management, the purpose of this part of the consultation is to seek stakeholders' views on the issues identified below that are relevant for the application of the existing regulatory framework to security tokens.

Technology neutrality is one of the guiding principles of the Commission's policies. A technologically neutral approach means that legislation should not mandate market participants to use a particular type of technology. It is therefore crucial to address any obstacles or identify any gaps in existing EU laws which could prevent the take-up of financial

innovation, such as DLT, or leave certain risks brought by these innovations unaddressed. In parallel, it is also important to assess whether the market practice or rules at national level could facilitate or be an impediment that should also be addressed to ensure a consistent approach at EU level.

---

[23] Trading venues are a regulated market, a multilateral trading facility or an organised trading facility.

[24] At level 1, the European Parliament and Council adopt the basic laws proposed by the Commission, in the traditional co-decision procedure. At level 2 the Commission can adopt, adapt and update technical implementing measures with the help of consultative bodies composed mainly of EU countries representatives. Where the level 2 measures require the expertise of supervisory experts, it can be determined in the basic act that these measures are delegated or implemented acts based on draft technical standards developed by the European supervisory authorities.

Current trends concerning security tokens

For the purpose of the consultation, we consider the instances where security tokens would be admitted to trading or traded on a trading venue within the meaning of MiFID. So far, however, there is evidence of only a few instances of security tokens issuance[25], with none of them having been admitted to trading or traded on a trading venue nor admitted in a CSD book-entry system[26].

Based on the limited evidence available at supervisory and regulatory level, it appears that existing requirements in the trading and post-trade area would largely be able to accommodate activities related to security tokens via permissioned networks and centralised platforms[27]. Such activities would be overseen by a central body or operator, de facto similarly to traditional market infrastructures such as multilateral trading venues or central security depositories. Based on the limited evidence currently available from the industry, it seems that activities related to security tokens would most likely develop via authorised centralised solutions. This could be driven by the relative efficiency gain that the use of the legacy technology of a central provider can generally guarantee (with near-instantaneous speed and high liquidity with large volumes), along with the business expertise of the central provider that would also ensure higher investor protection and easier supervision and enforcement of the rules.

On the other hand, it seems that adjustment of existing EU rules would be required to allow for the development of permissionless networks and decentralised platforms where activities would not be entrusted to a central body or operator but would rather occur on a peer-to-peer[28] basis. Given the absence of a central body that would be accountable for enforcing the rules of a public market, trading and post-trading on permissionless networks could also potentially create risks as regards market integrity and financial stability, which are regarded as being of utmost importance by the EU financial acquis.

The Commission services' understanding is that permissionless networks and decentralised platforms[29] are still in their infancy, with uncertain prospects for future applications in financial services due to their higher trade latency and lower liquidity. Permissionless decentralised platforms could potentially develop only at a longer time horizon when further maturing of the technology would provide solutions for a more efficient trading architecture. Therefore, it could be premature at this point in time to make any structural changes to the EU regulatory framework.

Security tokens are, in principle, covered by the EU legal framework on asset management in so far as such security tokens fall within the scope of "financial instrument" under MiFID II. To date, however, the examples of the regulatory use cases of DLT in the asset management domain have been incidental.

To conclude, depending on the feedback to this consultation, a gradual regulatory approach might be considered, trying to provide first legal clarity to market participants as regards permissioned networks and centralised platforms before considering changes in the regulatory framework to accommodate permissionless networks and decentralised platforms.

At the same time, the Commission services would like to use this opportunity to gather views on market trends as regards permissionless networks and decentralised platforms, including their potential impact on current business models and the possible regulatory approaches that may be needed to be considered, as part of a second step. A list of questions is included after the assessment by legislation.

-----

[25] For example the German Fundament STO which received the authorisation from Bafin in July 2019

[26] See section IV.2.5 for further information

[27] Type of crypto-asset trading platforms that holds crypto-assets on behalf of its clients. The trade settlement usually takes place in the books of the platforms, i.e. off-chain.

[28] In the trading context, going peer-to-peer means having participants buy and sell assets directly with each other, rather than working through an intermediary or third party service

[29] Type of crypto-asset trading platforms that do not hold crypto-assets on behalf of its clients. The trade settlement usually takes place on the DLT itself, i.e. on-chain.

Question 54. Please highlight any recent market developments (such as issuance of security tokens, development or registration of trading venues for security tokens, ...) as regards security tokens (at EU or national level)?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

STO, Custody Services and other ancillary services such as staking and auditing.

Question 55. Do you think that DLT could be used to introduce efficiencies or other benefits in the trading, post-trade or asset management areas?

- ◉ Completely agree
- ○ Rather agree
- ○ Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

If you agree with question 55, please indicate the specific areas where, in your opinion, the technology could afford most efficiencies when compared to the legacy system:

Raising of funds and payment of dividends. Clearing systems can be streamlined. Crypto-bonds issuances.

55.1 Please explain your reasoning for your answer to question 55:

Question 56. Do you think that the use of DLT for the trading and post-trading of financial instruments poses more financial stability risks when compared to the traditional trading and post-trade architecture?

- ○ Completely agree
- ○ Rather agree
- ○ Neutral
- ◉ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

56.1 Please explain your reasoning for your answer to question 56:

DLT based system are independent and trustworthy by origin and not only since it is run by a regulated and audited institution.

Question 57. Do you consider that DLT will significantly impact the role and operation of trading venues and post-trade financial market infrastructures (CCPs, CSDs) in the future (5/10 years' time)? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. We can already witness that the financial market infrastructures are investing and producing DLT based systems.

Question 58. Do you agree that a gradual regulatory approach in the areas of trading, post-trading and asset management concerning security tokens (e.g. provide regulatory guidance or legal clarification first regarding permissioned centralised solutions) would be appropriate?

- ○ Completely agree
- ● Rather agree
- ○ Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

58.1 Please explain your reasoning for your answer to question 58:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> A gradual approach will serve as a balance measure to allow innovation to happen and to protect the market in a balanced manner.

B. Assessment of legislation applying to 'security tokens'

1. Market in Financial Instruments Directive framework (MiFID II)

The Market in Financial Instruments Directive framework consists of a [directive (MiFID)](#) and a [regulation (MiFIR)](#) and their delegated acts. MiFID II is a cornerstone of the EU's regulation of financial markets seeking to improve their competitiveness by creating a single market for investment services and activities and to ensure a high degree of harmonised protection for investors in financial instruments. In a nutshell MiFID II sets out: (i) conduct of business and organisational requirements for investment firms; (ii) authorisation requirements for regulated markets, multilateral trading facilities, organised trading facilities and broker/dealers; (iii) regulatory reporting to avoid market abuse; (iv) trade transparency obligations for equity and non-equity financial instruments; and (v) rules on the admission of financial instruments to trading. MiFID also contains the harmonised EU rulebook on investor protection, retail distribution and investment advice.

1.1 Financial instruments

Under MiFID, financial instruments are specified in Section C of Annex I. These are inter alia 'transferable securities', 'money market instruments', 'units in collective investment undertakings' and various derivative instruments. Under Article 4(1)(15), 'transferable securities' notably means those classes of securities which are negotiable on the capital market, with the exception of instruments of payment.

There is currently no legal definition of security tokens in the EU financial services legislation. Indeed, in line with a functional and technologically neutral approach to different categories of financial instruments in MiFID, where security tokens meet necessary conditions to qualify as a specific type of financial instruments, they should be regulated as such. However, the actual classification of a security token as a financial instrument is undertaken by National Competent Authorities (NCAs) on a case-by-case basis.

[In its Advice, ESMA indicated](#) that in transposing MiFID into their national laws, the Member States have defined specific categories of financial instruments differently (i.e. some employ a restrictive list to define transferable securities, others use broader interpretations). As a result, while assessing the legal classification of a security token on a case by case basis, Member States might reach diverging conclusions. This might create further challenges to adopting a common regulatory and supervisory approach to security tokens in the EU.

Furthermore, some 'hybrid' crypto-assets can have 'investment-type' features combined with 'payment-type' or 'utility-type' characteristics. In such cases, the question is whether the qualification of 'financial instruments' must prevail or a different notion should be considered.

Question 59. Do you think that the absence of a common approach on when a security token constitutes a financial instrument is an impediment to the effective development of security tokens?

- ○ Completely agree
- ● Rather agree
- ○ Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

59.1 Please explain your reasoning for your answer to question 59:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Lack of the common approach to definition of security tokens at the European level would lead to already existing regulatory arbitrage across the EU which creates regulatory uncertainty instead of level-playing field for all entities engaging in crypto-related activities within the EU on a cross-border basis. Common approach

would definitely represent a positive signal for the industry and would most probably positively influence in particular big industry players who show a bit more interest in recent years to experiment with application of blockchain technology and tokenized assets on EU capital markets (in the field of DCM offerings especially).
Show less

Question 60. If you consider that the absence of a common approach on when a security token constitutes a financial instrument is an impediment, what would be the best remedies according to you?

Please rate from 1 (factor not relevant at all) to 5 (very relevant factor)

	1 (factor not relevant at all)	2	3	4	5 (very relevant factor)	Don't know / no opinion / not relevant
Harmonise the definition of certain types of financial instruments in the EU	○	●	○	○	○	○
Provide a definition of a security token at EU level	○	○	○	●	○	○
Provide guidance at EU level on the main criteria that should be taken into consideration while qualifying a crypto-asset as security token	○	○	○	●	○	○

60.1 Is there any other solution that would be the best remedies according to you?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

60.2 Please explain your reasoning for your answer to question 60:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 61. How should financial regulators deal with hybrid cases where tokens display investment-type features combined with other features (utility-type or payment-type characteristics)?

Please rate from 1 (factor not relevant at all) to 5 (very relevant factor)

	1 (factor not relevant at all)	2	3	4	5 (very relevant factor)	Don't know / no opinion / not relevant
Hybrid tokens should qualify as financial instruments/security tokens	○	○	○	○	○	◉
Hybrid tokens should qualify as unregulated crypto-assets (i.e. like those considered in section III. of the public consultation document)	○	○	○	○	○	◉
The assessment should be done on a case-by-case basis (with guidance at EU level)	○	○	○	○	◉	○

61.1 Is there any other way financial regulators should deal with hybrid cases where tokens display investment-type features combined with other features?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

61.2 Please explain your reasoning for your answer to question 61:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> As the types of tokens depend on their economic functionality (payment/security/utility), new forms of functionalities might appear in the near future (beyond the 3 forms - new functionalities related to other rights and obligations embedded in the token eg. rights of temporary possession, rights related to reputation etc.). Thus, one cannot foresee at this stage a clear cut determination based on financial instruments type of framework. Hybrid token should qualify as unregulated tokens depending on the predominance of their function. If the function related to securities countervails the other functions, then it should qualify as a financial instrument. The test on predominance should be under EU guidance across EU national systems, with concrete application by national authorities.

1.2. Investment firms

According to Article 4(1)(1) and Article 5 of MiFID, all legal persons offering investment services/activities in relation to financial instruments need be authorised as investment firms to perform those activities/services. The actual authorisation of an investment firm is undertaken by the NCAs with respect to the conditions, requirements and procedures to grant the authorisation. However, the application of these rules to security tokens may create challenges, as they were not designed with these instruments in mind.

Question 62. Do you agree that existing rules and requirements for investment firms can be applied in a DLT environment?

- ○ Completely agree
- ● Rather agree
- ○ Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

62.1 Please explain your reasoning for your answer to question 62:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Once the crypt asset is qualified as a financial instrument under MiFID II, the MiFID II rules can apply analogues. However, it may become tricky, where the rules require traditional security rather then a financial instrument only.

Question 63. Do you think that a clarification or a guidance on applicability of such rules and requirements would be appropriate for the market?

- ● Completely agree
- ○ Rather agree
- ○ Neutral
- ○ Rather disagree

- ⊙ Completely disagree
- ⊙ Don't know / no opinion / not relevant

63.1 Please explain your reasoning for your answer to question 63:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> The market is not familiar on how to apply MiFID II and other EU harmonised rules on new financial instruments. The devil lies in the detail when it comes to the practical approach of those rules.

1.3 Investment services and activities

Under MiFID Article 4(1)(2), investment services and activities are specified in Section A of Annex I, such as 'reception and transmission of orders, execution of orders, portfolio management, investment advice, etc. A number of activities related to security tokens are likely to qualify as investment services and activities. The organisational requirements, the conduct of business rules and the transparency and reporting requirements laid down in MiFID II would also apply, depending on the types of services offered and the types of financial instruments.

Question 64. Do you think that the current scope of investment services and activities under MiFID II is appropriate for security tokens?

- ⊙ Completely agree
- ⦿ Rather agree
- ⊙ Neutral
- ⊙ Rather disagree
- ⊙ Completely disagree
- ⊙ Don't know / no opinion / not relevant

64.1 Please explain your reasoning for your answer to question 64:

5000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> See our comment for Q47.

Question 65. Do you consider that the transposition of MiFID II into national laws or existing market practice in your jurisdiction would facilitate or otherwise prevent the use of DLT for investment services and activities? Please explain your reasoning.

Yes. We can see this already happening in the German market where the law maker and the authorities have clarified the regulation on crypto assets and crypto custody which had a facilitating effect on the DLT market in general.

1.4. Trading venues

Under MiFID Article 4(1)(24) 'trading venue' means a regulated market (RM), a Multilateral Trading Facility (MTF) or an Organised Trading Facility (OTF') which are defined as a multilateral system operated by a market operator or an investment firm, bringing together multiple third-party buying and selling interests in financial instruments. This means that the market operator or an investment firm must be an authorised entity, which has legal personality.

As also reported by ESMA in its advice, platforms which would engage in trading of security tokens may fall under three main broad categories as follows:

- Platforms with a central order book and/or matching orders would qualify as multilateral systems;

- Operators of platforms dealing on own account and executing client orders against their proprietary capital, would not qualify as multilateral trading venues but rather as investment firms; and

- Platforms that are used to advertise buying and selling interests and where there is no genuine trade execution or arranging taking place may be considered as bulletin boards and fall outside of MiFID II scope (recital 8 of MiFIR).

Question 66. Would you see any particular issues (legal, operational) in applying trading venue definitions and requirements related to the operation and authorisation of such venues to a DLT environment which should be addressed?
Please explain your reasoning.

Yes. The traditional rules are not made for crypto players. For example: Trade reporting requires WKN and ISIN. However, these are not provided for many crypto assets. Plus, some coins (e.g. BTC) have no issuer.

1.5. Investor protection

A fundamental principle of MiFID II (Articles 24 and 25) is to ensure that investment firms act in the best interests of their clients. Firms shall prevent conflicts of interest, act honestly, fairly and professionally and execute orders on terms most favourable to the clients. With regard to investment advice and portfolio management, various information and product governance requirements apply to ensure that the client is provided with a suitable product.

Question 67. Do you think that current scope of investor protection rules (such as information documents and the suitability assessment) are appropriate for security tokens? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. However, adding a suitability test related to digital literacy for crypto-securities investor protection would be useful. (see Comments to Q47)
As well as additional information on the smart contracts used.

Question 68. Would you see any merit in establishing specific requirements on the marketing of security tokens via social media or online? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. The communication of Crypto related investments happens mostly on new platforms (e.g. Telegram messenger) for which no specific requirements exist. This needs to change.

Question 69. Would you see any particular issue (legal, operational,) in applying MiFID investor protection requirements to security tokens? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. Some requirements are tailored to classical securities rather than Security Token. This needs to be changed also from a civil law perspective and additional laws.

1.6. SME growth markets

To be registered as SME growth markets, MTFs need to comply with requirements under Article 33 (e.g. 50% of SME issuers, appropriate criteria for initial and ongoing admission, effective systems and controls to prevent and detect market abuse). SME growth markets focus on trading securities of SME issuers. The average number of transactions in SME securities is significantly lower than those with large capitalisation and therefore less dependent on low latency and high throughput. Since trading solutions on DLT often do not allow processing the amount of transactions typical for most liquid markets, the Commission is interested in gathering feedback on whether trading on DLT networks could offer cost efficiencies (e.g. lower costs of listing, lower transaction fees) or other benefits for SME Growth Markets that are not necessarily dependent on low latency and high throughput.

Question 70. Do you think that trading on DLT networks could offer cost efficiencies or other benefits for SME Growth Markets that do not require low latency and high throughput? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Both lower costs of listing and lower transaction fees.
Securitization of derivatives based on SMEs issued securities could be enhanced by cost efficiencies and more information in relation to the underlying securities based on data gathering (almost automatically) from the DLT ledgers involved for each security.

1.7. Systems resilience, circuit breakers and electronic trading

According to Article 48 of MiFID, Member States shall require a regulated market to have in place effective systems, procedures and arrangements to ensure its trading systems are resilient, have sufficient capacity and fully tested to ensure orderly trading and effective business continuity arrangements in case of system failure. Furthermore regulated markets that permits direct electronic access[30] shall have in place effective systems procedures and arrangements to ensure that members are only permitted to provide such services if they are investment firms authorised under MiFID II or credit institutions. The same requirements also apply to MTFs and OTFs according to Article 18(5). These requirements could be an issue for security tokens, considering that crypto-asset trading platforms typically provide direct access to retail investors.

----

[30] As defined by article 4(1)(41) and in accordance with Art 48(7) of MIFID by which trading venues should only grant permission to members or participants to provide direct electronic access if they are investment firms authorised under MiFID or credit institutions authorised under the Credit Requirements Directive (2013/36/EU)

Question 71. Would you see any particular issue (legal, operational) in applying these requirements to security tokens which should be addressed? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. The entire rules and procedures are provided for classical securities (e.g. ISIN, WKN, Issuer infomration) rather than for Security Token. This needs to be adopted.

1.8. Admission of financial instruments to trading

In accordance with Article 51 of MiFID, regulated markets must establish clear and transparent rules regarding the admission of financial instruments to trading as well as the conditions for suspension and removal. Those rules shall ensure that financial instruments admitted to trading on a regulated market are capable of being traded in a fair, orderly and efficient manner. Similar requirements apply to MTFs and OTFs according to Article 32. In short, MiFID lays down general principles that should be embedded in the venue's rules on admission to trading, whereas the specific rules are established by the venue itself. Since markets in security tokens are very much a developing phenomenon, there may be merit in reinforcing the legislative rules on admission to trading criteria for these assets.

Question 72. Would you see any particular issue (legal, operational) in applying these requirements to security tokens which should be addressed? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. See answer under Q 71.

Question 1.9 Access to a trading venues

In accordance with Article 53(3) and 19(2) of MiFID, RMs and MTFs may admit as members or participants only investment firms, credit institutions and other persons who are of sufficient good repute; (b) have a sufficient level of trading ability, competence and ability (c) have adequate organisational arrangements; (d) have sufficient resources for their role. In effect, this excludes retail clients from gaining direct access to trading venues. The reason for limiting this kind of participants in trading venues is to protect investors and ensure the proper functioning of the financial markets. However, these requirements might not be appropriate for the trading of security tokens as crypto-asset trading platforms allow clients, including retail investors, to have direct access without any intermediation.

Question 73. What are the risks and benefits of allowing direct access to trading venues to a broader base of clients? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Access to finance for crypto companies through crypto crowdfunding - is the main benefit.
> Limiting the retail investors does not add to the purpose of capital markets. Market infrastructure providers should be regulated as to ensure consumer protection in relation to competence, trading ability, cybersecurity resilience. As long as retail investors understand the investment risks, then there should not be additional limitations based on retail/institutional participants. One of the major innovations brought by DLT is the lack of intermediaries - thus the P2P framework should be allowed also when trading crypto securities, as long as the trading facilities, infrastructure and cross-cutting rules such as MAR are being respected by market participants and infrastructure and service providers.

1.10 Pre and post-transparency requirements

In its Articles 3 to 11, MiFIR sets out transparency requirements for trading venues in relations to both equity and non-equity instruments. In a nutshell for equity instruments, it establishes pre-trade transparency requirements with certain waivers subject to restrictions (i.e. double volume cap) as well as post-trade transparency requirements with authorised deferred publication. Similar structure is replicated for non-equity instruments. These provisions would apply to security tokens. The availability of data could perhaps be an issue for best execution[31] of security tokens platforms. For the transparency requirements, it could perhaps be more difficult to establish meaningful transparency thresholds according to the calibration specified in MIFID, which is based on EU wide transaction data. However, under current circumstances, it seems difficult to clearly determine the need for any possible adaptations of existing rules due to the lack of actual trading of security tokens.

Question 74. Do you think these pre- and post-transparency requirements are appropriate for security tokens?

○ Completely agree
○ Rather agree
○ Neutral
● Rather disagree
○ Completely disagree
○ Don't know / no opinion / not relevant

74.1 Please explain your reasoning for your answer to question 74:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> See our answer to Q 71.

Question 75. Would you see any particular issue (legal, operational) in applying these requirements to security tokens which should be addressed (e.g. in terms of availability of data or computation of thresholds)? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. Data service provider for security token (those with good quality of information) are rare.

1.11. Transaction reporting and obligations to maintain records

In its Article 25 and 26, MiFIR sets out detailed reporting requirements for investment firms to report transactions to their competent authority. The operator of the trading venue is responsible for reporting the details of the transactions where the participants is not an investment firm. MiFIR also obliges investment firms or the operator of the trading venue to maintain records for five years. Provisions would apply to security tokens very similarly to traditional financial instruments. The availability of all information on financial instruments required for reporting purposes by the Level 2 provisions could perhaps be an issue for security tokens (e.g. ISIN codes are mandatory).

Question 76. Would you see any particular issue (legal, operational) in applying these requirement to security tokens which should be addressed? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. See answer to Q 71.

2. Market Abuse Regulation (MAR)

MAR establishes a comprehensive legislative framework at EU level aimed at protecting market integrity. It does so by establishing rules around prevention, detection and reporting of market abuse. The types of market abuse prohibited in MAR are insider dealing, unlawful disclosure of inside information and market manipulation. The proper application of the MAR framework is very important for guaranteeing an appropriate level of integrity and investor protection in the context of trading in security tokens.

Security tokens are covered by the MAR framework where they fall within the scope of that regulation, as determined by its Article 2. Broadly speaking, this means that all transactions in security tokens admitted to trading or traded on a trading venue (under MiFID Article 4(1)(24) 'trading venue' means a regulated market (RM), a Multilateral Trading Facility (MTF) or an Organised Trading Facility (OTF')) are captured by its provisions, regardless of whether transactions or orders in those tokens take place on a trading venue or are conducted over-the-counter (OTC).

2.1. Insider dealing

Pursuant to Article 8 of MAR, insider dealing arises where a person possesses inside information and uses that information by acquiring or disposing of, for its own account or for the account of a third party, directly or indirectly, financial instruments to which that information relates. In the context of security tokens, it might be the case that new actors, such as miners or wallet providers, hold new forms of inside information and use it to commit market abuse. In this regard, it should be noted that Article 8(4) of MAR contains a catch-all provision applying the notion of insider dealing to all persons who possess inside information other than in circumstances specified elsewhere in the provision.

Question 77. Do you think that the current scope of Article 8 of MAR on insider dealing is appropriate to cover all cases of insider dealing for security t o k e n s ?
Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. The wording is neutral enough to allow the application to security tokens.

2.2. Market manipulation

In its Article 12(1)(a), MAR defines market manipulation primarily as covering those transactions and orders which (i) give false or misleading signals about the volume or price of financial instruments or (ii) secure the price of a financial instrument at an abnormal or artificial level. Additional instances of market manipulation are described in paragraphs (b) to (d) of Article 12(1) of MAR.

Since security tokens and blockchain technology used for transacting in security tokens differ from how trading of traditional financial instruments on existing trading infrastructure is conducted, it might be possible for novel types of market manipulation to arise that MAR does not currently address. Finally, there could be cases where a certain financial instrument is covered by MAR but a related unregulated crypto-asset is not in scope of the market abuse framework. Where there would be a correlation in values of such two instruments, it would also be conceivable to influence the price or value of one through manipulative trading activity of the other.

Question 78. Do you think that the notion of market manipulation as defined in Article 12 of MAR is sufficiently wide to cover instances of market m a n i p u l a t i o n   o f   s e c u r i t y   t o k e n s?
Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> The MAR also contains insider trading rules as part of the market abuse law. Insider trading is primarily controlled by the prohibition of insider trading under Art. 14 MAR. This is further reinforced by further measures intended to prevent insider trading, such as:
> x the ad hoc publicity requirements of Art. 17 MAR,
> x the duty to report directors' dealings pursuant to Art. 19 MAR and
> x the maintenance of insider lists in accordance with Art. 18 MAR.
> When considering the applicability of such measures to tokens it is interesting to note that tokens are currently often sold by very early-stage start-ups looking for capital to finance the development of their proposed product. Such early stage (and often pre-minimum viable product) investments are particularly risky, with a total loss of the investment probably if the project fails. In such early-stage companies, even

minor developments at product level can have significant impacts on the market pricing of their tokens, and could therefore be classified as inside information and therefore should be disclosed to the public.

This could risk markets being flooded with unnecessary information on a semi-continual basis that is more confusing than informative. When assessing whether such information should be disclosed, it is important to consider whether that information "would be likely to have a significant effect on the price" (irrespective of the direction in which the price might fluctuate).

In order to avoid risks of market manipulation in secondary token markets, the extension of the scope of MAR should be broadened as the current wording of the provisions is not sufficiently broad to ensure adequate restrictions on market manipulation.

Question 79. Do you think that there is a particular risk that manipulative trading in crypto-assets which are not in the scope of MAR could affect the price or value of financial instruments covered by MAR?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Acknowledgement of manipulatory trading techniques specifically related to crypto trading:

1.Wash Trading: Trading with yourself or between more players in a cartelized manner ("Painting the Tape")

2. Margin Trading (Pump & Dump)

3. Spoofing – placing fake orders with no intention of completing them

4. Front-running : an exchange operator takes precedence to an already made order by a customer (Yobit exchange case)

5. Insider Trading :

•where information to coin listings are used for making profits before any other customer;

•Using internal data for trading – suing data analytics to place orders on specific coin trading

Further research on specific manipulation risks with decentralised token markets required.

3. Short Selling Regulation (SSR)

The Short Selling Regulation (SSR) sets down rules that aim to achieve the following objectives: (i) increase transparency of significant net short positions held by investors; (ii) reduce settlement risks and other risks associated with uncovered short sales; (iii) reduce risks to the stability of sovereign debt markets by providing for the temporary suspension of short-selling activities, including taking short positions via sovereign credit default swaps (CDSs), where sovereign debt markets are not functioning properly. The SSR applies to MiFID II financial instruments admitted to trading on a trading venue in the EU, sovereign debt instruments, and derivatives that relate to both categories.

According to ESMA's advice, security tokens fall in the scope of the SSR where a position in the security token would confer a financial advantage in the event of a decrease in the price or value of a share or sovereign debt. However, ESMA remarks that the determination of net short positions for the application of the SSR is dependent on the list of financial instruments set out in Annex I of Commission Delegated Regulation (EU) 918/2012), which should therefore be revised to include those security tokens that might generate a net short position on a share or on a sovereign debt. According to ESMA, it is an open question whether a transaction in an unregulated crypto-asset could confer a financial advantage in the event of a decrease in the price or value of a share or sovereign debt, and consequently, whether the Short Selling Regulation should be amended in this respect.

Question 80. Have you detected any issues that would prevent effectively applying SSR to security tokens?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
Transparency for significant net short positions	○	○	●	○	○	○
Restrictions on uncovered short selling	○	○	●	○	○	○
Competent authorities' power to apply temporary restrictions to short selling	○	○	○	●	○	○

80.1 Is there any other issue that would prevent effectively applying SSR to security tokens? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

80.2 Please explain your reasoning for your answer to question 80:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 81. Have you ever detected any unregulated crypto-assets that could confer a financial advantage in the event of a decrease in the price or value of a share or sovereign debt? Please explain your reasoning.

4. Prospectus Regulation (PR)

The Prospectus Regulation establishes a harmonised set of rules at EU level about the drawing up, structure and oversight of the prospectus, which is a legal document accompanying an offer of securities to the public and/or an admission to trading on a regulated market. The prospectus describes a company's main line of business, its finances, its shareholding structure and the securities that are being offered and/or admitted to trading on a regulated market. It contains the information an investor needs before making a decision whether to invest in the company's securities.

4.1. Scope and exemptions

With the exception of out of scope situations and exemptions (Article 1(2) and (3)), the PR requires the publication of a prospectus before an offer to the public or an admission to trading on a regulated market (situated or operating within a Member State) of transferable securities as defined in MiFID II. The definition of 'offer of securities to the public' laid down in Article 2(d) of the PR is very broad and should encompass offers (e.g. STOs) and advertisement relating to security tokens. If security tokens are offered to the public or admitted to trading on a regulated market, a prospectus would always be required unless one of the exemptions for offers to the public under Article 1(4) or for admission to trading on a RM under Article 1(5) applies.

Question 82. Do you consider that different or additional exemptions should apply to security tokens other than the ones laid down in Article 1(4) and Article 1(5) of PR?

- ○ Completely agree
- ○ Rather agree
- ● Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

82.1 Please explain your reasoning for your answer to question 82:

4.2. The drawing up of the prospectus

Delegated Regulation (EU) 2019/980, which lays down the format and content of all the prospectuses and its related documents, does not include schedules for security tokens. However, Recital 24 clarifies that, due to the rapid evolution of securities markets, where securities are not covered by the schedules to that Regulation, national competent authorities should decide in consultation with the issuer which information should be included in the prospectus. Such approach is meant to be a temporary solution. A long term solution would be to either (i) introduce additional and specific schedules for security tokens, or (ii) lay down 'building blocks' to be added as a complement to existing schedules when drawing up a prospectus for security tokens.

The level 2 provisions of prospectus also defines the specific information to be included in a prospectus, including Legal Entity Identifiers (LEIs) and ISIN. It is therefore important that there is no obstacle in obtaining these identifiers for security tokens.

The eligibility for specific types of prospectuses or relating documents (such as the secondary issuance prospectus, the EU Growth prospectus, the base prospectus for non-equity securities or the universal registration document) will depend on the specific types of transferable securities to which security tokens correspond, as well as on the type of the issuer of those securities (i.e. SME, mid-cap company, secondary issuer, frequent issuer).

Article 16 of PR requires issuers to disclose risk factors that are material and specific to the issuer or the security, and corroborated by the content of the prospectus. ESMA's guidelines on risk factors under the PR assist national competent authorities in their review of the materiality and specificity of risk factors and of the presentation of risk factors across categories depending on their nature. The prospectus could include pertinent risks associated with the underlying technology (e.g. risks relating to technology, IT infrastructure, cyber security, etc, ...). ESMA's guidelines on risk factors could be expanded to address the issue of materiality and specificity of risk factors relating to security tokens.

Question 83. Do you agree that Delegated Regulation (EU) 2019/980 should include specific schedules about security tokens?

- ◉ Yes
- ◎ No
- ◎ Don't know / no opinion / not relevant

83.1 If you do agree that Delegated Regulation (EU) 2019/980 should include specific schedules about security tokens, please indicate the most effective approach: a 'building block approach' (i.e. additional information about the issuer and/or security tokens to be added as a complement to existing schedules) or a 'full prospectus approach' (i.e. completely new prospectus schedules for security tokens). Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> A building block approach - covering the technical risks, and any related information needed in relation to the DLT technology and business model involving DLT, rather than a full prospectus.

Question 84. Do you identify any issues in obtaining an ISIN for the purpose of issuing a security token?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

From a theoretical perspective no, as STOs should provide such information. But in reality, many token do not have an ISIN.

Question 85. Have you identified any difficulties in applying special types of prospectuses or related documents (i.e. simplified prospectus for secondary issuances, the EU Growth prospectus, the base prospectus for non-equity securities, the universal registration document) to security tokens that would require amending these types of prospectuses or related documents? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. Please see all the issues around the BitBond STO, confirmed by German regulator in 2019.

Question 86. Do you believe that an *ad hoc* alleviated prospectus type or regime (taking as example the approach used for the EU Growth prospectus or for the simplified regime for secondary issuances) should be introduced for security tokens?

- ◉ Yes
- ○ No
- ○

Don't know / no opinion / not relevant

86.1 Please explain your reasoning for your answer to question 86:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> The EU Growth prospectus is a good example.

Question 87. Do you agree that issuers of security tokens should disclose specific risk factors relating to the use of DLT?

- ○ Completely agree
- ● Rather agree
- ○ Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

87.1 If you do agree that issuers of security tokens should disclose specific risk factors relating to the use of DLT, please indicate if ESMA's guidelines on risks factors should be amended accordingly. Please explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Due to their different technical nature, certain risks involved in purchasing, holding & trading tokens differ from traditional securities managed by multiple intermediaries, and should also be addressed in order to adequately protect consumers, purchasers and investors. When the European Commission adopts the delegated regulations setting out technical standards as to the content and format of the prospectuses to be published in accordance with the Prospectus Regulation, we recommend that these specific challenges be considered, including the decentralised nature of blockchain technologies whilst remaining technology-neutral in order to address the new risks for consumers and related changes to market infrastructure

5. Central Securities Depositories Regulation (CSDR)

CSDR aims to harmonise the timing and conduct of securities settlement in the European Union and the rules for central securities depositories (CSDs) which operate the settlement infrastructure. It is designed to increase the safety and efficiency of the system, particularly for intra-EU transactions. In general terms, the scope of the CSDR refers to the 11 categories of financial instruments listed under MiFID. However, various requirements refer only to subsets of categories under MiFID.

Article 3(2) of CSDR requires that transferable securities traded on a trading venue within the meaning of MiFID II be recorded in book-entry form in a CSD. The objective is to ensure that those financial instruments can be settled in a securities settlement system, as those described by the Settlement Finality Directive (SFD). Recital 11 of CSDR

indicates that CSDR does not prescribe any particular method for the initial book-entry recording. Therefore, in its advice, ESMA indicates that any technology, including DLT, could virtually be used, provided that this book-entry form is with an authorised CSD. However, ESMA underlines that there may be some national laws that could pose restrictions to the use of DLT for that purpose.

There may also be other potential obstacles stemming from CSDR. For instance, the provision of 'Delivery versus Payment' settlement in central bank money is a practice encouraged by CSDR. Where not practical and available, this settlement should take place in commercial bank money. This could make the settlement of securities through DLT difficult, as the CSDR would have to effect movements in its cash accounts at the same time as the delivery of securities on the DLT.

This section is seeking stakeholders' feedback on potential obstacles to the development of security tokens resulting from CSDR.

Question 88. Would you see any particular issue (legal, operational, technical) with applying the following definitions in a DLT environment?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
Definition of 'central securities depository' and whether platforms can be authorised as a CSD operating a securities settlement system which is designated under the SFD	○	○	○	●	○	○
Definition of 'securities settlement system' and whether a DLT platform can be qualified as securities settlement system under the SFD	○	○	○	●	○	○
Whether records on a DLT platform can be qualified as securities accounts and what can be qualified as credits and debits to such an account;	○	○	○	●	○	○
Definition of 'book-entry form' and 'dematerialised form	○	○	●	○	○	○
Definition of settlement (meaning the completion of a securities transaction where it is concluded with the aim of discharging the	○	○	●	○	○	○

obligations of the parties to that transaction through the transfer of cash or securities, or both);	○	○	○	○	○	○
What could constitute delivery versus payment in a DLT network, considering that the cash leg is not processed in the network	○	○	○	●	○	○
What entity could qualify as a settlement internaliser	○	○	●	○	○	○

88.1 Is there any other particular issue with applying the following definitions in a DLT environment Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

88.2 Please explain your reasoning for your answer to question 88:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 89. Do you consider that the book-entry requirements under CSDR are compatible with security tokens?

○ Yes
● No
○ Don't know / no opinion / not relevant

89.1 Please explain your reasoning for your answer to question 89:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 90. Do you consider that national law (e.g. requirement for the transfer of ownership) or existing market practice in your jurisdiction would facilitate or otherwise prevent the use of DLT solution? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

For Germany: The current civil law regime does not allow the transfer of ownership of a security in case the transaction is only run on a DLT and not physically. This law will be changed shortly to allow DLT based transactions of securities without the need of a physical transaction.

Question 91. Would you see any particular issue (legal, operational, technical) with applying the current rules in a DLT environment?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
Rules on settlement periods for the settlement of certain types of financial instruments in a securities settlement system	○	○	●	○	○	○
Rules on measures to prevent settlement fails	○	○	●	○	○	○
Organisational requirements for CSDs	○	○	○	●	○	○

Rules on outsourcing of services or activities to a third party	○	●	○	○	○	○
Rules on communication procedures with market participants and other market infrastructures	○	○	●	○	○	○
Rules on the protection of securities of participants and those of their clients	○	●	○	○	○	○
Rules regarding the integrity of the issue and appropriate reconciliation measures	○	●	○	○	○	○
Rules on cash settlement	○	○	○	●	○	○
Rules on requirements for participation	○	○	○	●	○	○
Rules on requirements for CSD links	○	○	○	●	○	○
Rules on access between CSDs and access between a CSD and another market infrastructure	○	○	○	○	●	○

91.1 Is there any other particular issue with applying the current rules in a DLT environment, (including other provisions of CSDR, national rules applying the EU acquis, supervisory practices, interpretation, applications...)? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

91.2 Please explain your reasoning for your answer to question 91:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 92. In your Member State, does your national law set out additional requirements to be taken into consideration, e.g. regarding the transfer of

ownership (such as the requirements regarding the recording on an account with a custody account keeper outside a DLT environment)? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> For Germany: Yes. There is a set or rules which need to be considered.

6. Settlement Finality Directive (SFD)

The Settlement Finality Directive lays down rules to minimise risks related to transfers and payments of financial products, especially risks linked to the insolvency of participants in a transaction. It guarantees that financial product transfer and payment orders can be final and defines the field of eligible participants. SFD applies to settlement systems duly notified as well as any participant in such a system.

The list of persons authorised to take part in a securities settlement system under SFD (credit institutions, investment firms, public authorities, CCPs, settlement agents, clearing houses, system operators) does not include natural persons. This obligation of intermediation does not seem fully compatible with the functioning of crypto-asset platforms that rely on retail investors' direct access.

Question 93. Would you see any particular issue (legal, operational, technical) with applying the following definitions in the SFD or its transpositions into national law in a DLT environment?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
Definition of a securities settlement system	○	○	○	●	○	○
Definition of system operator	○	○	○	●	○	○
Definition of participant	○	○	●	○	○	○

Definition of institution	○	●	○	○	○	○
Definition of transfer order	○	○	●	○	○	○
What could constitute a settlement account	○	○	○	●	○	○
What could constitute collateral security	○	○	●	○	○	○

93.1 Is there any other particular issue with applying the following definitions in the SFD or its transpositions into national law in a DLT environment? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

93.2 Please explain your reasoning for your answer to question 93:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 94. SFD sets out rules on conflicts of laws. According to you, would there be a need for clarification when applying these rules in a DLT network (in particular with regard to the question according to which criteria the location of the register or account should be determined and thus which Member State would be considered the Member State in which the register or account, where the relevant entries are made, is maintained)? Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes. The current EU regime provides already rules in that respect, but it is not clear whether these rules apply to DLT related matters.

Question 95. In your Member State, what requirements does your national law establish for those cases which are outside the scope of the SFD rules on conflicts of laws?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 96. Do you consider that the effective functioning and/or use of DLT solution is limited or constrained by any of the SFD provisions?

○ Yes
○ No
◉ Don't know / no opinion / not relevant

96.1 Please explain your reasoning for your answer to question 96:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

7. Financial Collateral Directive (FCD)

The [Financial Collateral Directive](#) aims to create a clear uniform EU legal framework for the use of securities, cash and credit claims as collateral in financial transactions. Financial collateral is the property provided by a borrower to a lender to minimise the risk of financial loss to the lender if the borrower fails to meet their financial obligations to the lender. DLT can present some challenges as regards the application of FCD. For instance, collateral that is provided without title transfer, i.e. pledge or other form of security financial collateral as defined in the FCD, needs to be enforceable in a distributed ledger[32].

---

[32] ECB Advisory Group on market infrastructures for securities and collateral, "the potential impact of DLTs on securities post-trading harmonisation and on the wider EU financial market integration" (2017).

Question 97. Would you see any particular issue (legal, operational, technical) with applying the following definitions in the FCD or its transpositions into national law in a DLT environment?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
If crypto-assets qualify as assets that can be subject to financial collateral arrangements as defined in the FCD	○	●	○	○	○	○
If crypto-assets qualify as book-entry securities collateral	○	○	○	○	○	●
If records on a DLT qualify as relevant account	○	●	○	○	○	○

97.1 Is there any other particular issue with applying the following definitions in the FCD or its transpositions into national law in a DLT environment? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

97.2 Please explain your reasoning for your answer to question 97:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 98. FCD sets out rules on conflict of laws. Would you see any particular issue with applying these rules in a DLT network[32]?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. It is not clear whether these rules apply to DLT network.

Question 99. In your Member State, what requirements does your national law establish for those cases which are outside the scope of the FCD rules on conflicts of laws?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 100. Do you consider that the effective functioning and/or use of DLT solution is limited or constrained by any of the FCD provisions?

○ Yes
○ No
◉ Don't know / no opinion / not relevant

100.1 Please explain your reasoning for your answer to question 100:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

8. European Markets Infrastructure Regulation (EMIR)

The European Markets Infrastructure Regulation (EMIR) applies to the central clearing, reporting and risk mitigation of over-the-counter (OTC) derivatives, the clearing obligation for certain OTC derivatives, the central clearing by central counterparties (CCPs) of contracts traded on financial markets (including bonds, shares, OTC derivatives, Exchange-Traded Derivatives, repos and securities lending transactions) and services and activities of CCPs and trade repositories (TRs).

The central clearing obligation of EMIR concerns only certain OTC derivatives. MiFIR extends the clearing obligation by CCPs to regulated markets for exchange-traded derivatives. At this stage, however, the Commission services does not have knowledge of any project of securities token that could enter into those categories.

A recent development has also been the emergence of derivatives with crypto-assets as underlying.

Question 101. Do you think that security tokens are suitable for central clearing?

○ Completely agree
◉ Rather agree
○ Neutral
○ Rather disagree
○ Completely disagree
○ Don't know / no opinion / not relevant

101.1 Please explain your reasoning for your answer to question 101:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

In traditional markets for traditional derivatives which only use crypto securities as underlying assets.

Question 102. Would you see any particular issue (legal, operational, technical) with applying the current rules in a DLT environment?

Please rate from 1 (not a concern) to 5 (strong concern)

	1 (not a concern)	2	3	4	5 (strong concern)	Don't know / no opinion / strong concern
Rules on margin requirements, collateral requirements and requirements regarding the CCP's investment policy	○	○	●	○	○	○
Rules on settlement	○	○	○	●	○	○
Organisational requirements for CCPs and for TRs	○	○	○	○	●	○
Rules on segregation and portability of clearing members' and clients' assets and positions	○	○	●	○	○	○
Rules on requirements for participation	○	●	○	○	○	○
Reporting requirements	○	○	○	○	●	○

102.1 Is there any other particular issue (including other provisions of EMIR, national rules applying the EU acquis, supervisory practices, interpretation, applications, ...) with applying the current rules in a DLT environment? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

102.2 Please explain your reasoning for your answer to question 102:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 103. Would you see the need to clarify that DLT solutions including permissioned blockchain can be used within CCPs or TRs?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. Currently, the rules are not clear in this respect.

Question 104. Would you see any particular issue with applying the current rules to derivatives the underlying of which are crypto assets, in particular considering their suitability for central clearing? Please explain your reasoning

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Yes. The rules need to be explained in respect to crypto assets.

9. The Alternative Investment Fund Directive

The Alternative Investment Fund Managers Directive (AIFMD) lays down the rules for the authorisation, ongoing operation and transparency of the managers of alternative investment funds (AIFMs) which manage and/or market alternative investment funds (AIFs) in the EU.

The following questions seek stakeholders' views on whether and to what extent the application of AIFMD to tokens could raise some challenges. For instance, AIFMD sets out an explicit obligation to appoint a depositary for each AIF. Fulfilling this requirement is a part of the AIFM authorisation and operation. The assets of the AIF shall be entrusted to the depositary for safekeeping. For crypto-assets that are not 'security tokens' (those which do not qualify as financial instruments), the rules for 'other assets' apply under the AIFMD. In such a case, the depositary needs to ensure the safekeeping (which involves verification of ownership and up-to-date recordkeeping) but not the custody. An uncertainty can arguably occur whether the depositary can perform this task for security tokens and also whether the safekeeping requirements can be complied with.

Question 105. Do the provisions of the EU AIFMD legal framework in the following areas are appropriately suited for the effective functioning of DLT solutions and the use of security tokens?

Please rate from 1 (not suited) to 5 (very suited)

	1 (not suited)	2	3	4	5 (very suited)	Don't know / no opinion / very suited
AIFMD provisions pertaining to the requirement to appoint a depositary, safe-keeping and the requirements of the depositary, as applied to security tokens;	○	○	○	◉	○	○
AIFMD provisions requiring AIFMs to maintain and operate effective organisational and administrative arrangements, including with respect to identifying, managing and monitoring the conflicts of interest;	○	○	○	○	◉	○
Employing liquidity management systems to monitor the liquidity risk of the AIF, conducting stress tests, under normal and exceptional liquidity conditions, and ensuring that the liquidity profile and the redemption policy are consistent;	○	○	◉	○	○	○
AIFMD requirements that appropriate and consistent procedures are established for a proper and independent valuation of the assets;	○	◉	○	○	○	○

| Transparency and reporting provisions of the AIFMD legal framework requiring to report certain information on the principal markets and instruments. | ◎ | ◎ | ◎ | ◉ | ◎ | ◎ |

105.1 Is there any other area in which the provisions of the EU AIFMD legal framework are appropriately suited for the effective functioning of DLT solutions and the use of security tokens? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

105.2 Please explain your reasoning for your answer to question 105:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 106. Do you consider that the effective functioning of DLT solutions and/or use of security tokens is limited or constrained by any of the AIFMD provisions?

- ◉ Yes
- ◎ No
- ◎ Don't know / no opinion / not relevant

106.1 If you do consider that the effective functioning of DLT solutions and/or use of security tokens is limited or constrained by any of the AIFMD provisions, please provide specific examples with relevant provisions in the EU acquis. Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

There are a number of provisions which need to be adopted to security tokens.

93

10. The Undertakings for Collective Investment in Transferable Securities Directive (UCITS Directive)

The UCITS Directive applies to UCITS established within the territories of the Member States and lays down the rules, scope and conditions for the operation of UCITS and the authorisation of UCITS management companies. The UCITS directive might be perceived as potentially creating challenges when the assets are in the form of 'security tokens', relying on DLT.

For instance, under the UCITS Directive, an investment company and a management company (for each of the common funds that it manages) shall ensure that a single depositary is appointed. The assets of the UCITS shall be entrusted to the depositary for safekeeping. For crypto-assets that are not 'security tokens' (those which do not qualify as financial instruments), the rules for 'other assets' apply under the UCITS Directive. In such a case, the depositary needs to ensure the safekeeping (which involves verification of ownership and up-to-date recordkeeping) but not the custody. This function could arguably cause perceived uncertainty where such assets are security tokens.

Question 107. Do the provisions of the EU UCITS Directive legal framework in the following areas are appropriately suited for the effective functioning of DLT solutions and the use of security tokens?

Please rate from 1 (not suited) to 5 (very suited)

	1 (not suited)	2	3	4	5 (very suited)	Don't know / no opinion / very suited
Provisions of the UCITS Directive pertaining to the eligibility of assets, including cases where such provisions are applied in conjunction with the notion "financial instrument" and/or "transferable security"	○	◉	○	○	○	○
Rules set out in the UCITS Directive pertaining to the valuation of assets and the rules for calculating the sale or issue price and the repurchase or redemption price of the units of a UCITS, including where such rules are laid down in the applicable national law, in the fund rules or in the instruments of incorporation of the investment company;	○	○	○	◉	○	○

UCITS Directive rules on the arrangements for the identification, management and monitoring of the conflicts of interest, including between the management company and its clients, between two of its clients, between one of its clients and a UCITS, or between two -UCITS;	○	○	○	○	◉	○
UCITS Directive provisions pertaining to the requirement to appoint a depositary, safe-keeping and the requirements of the depositary, as applied to security tokens;	○	○	○	○	◉	○
Disclosure and reporting requirements set out in the UCITS Directive.	○	○	○	○	◉	○

107.1 Is there any other area in which the provisions of the EU UCITS Directive legal framework are appropriately suited for the effective functioning of DLT solutions and the use of security tokens? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

107.2 Please explain your reasoning for your answer to question 107:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

11. Other final comments and questions as regards tokens

It appears that permissioned blockchains and centralised platforms allow for the trade life cycle to be completed in a manner that might conceptually fit into the existing regulatory framework. However, it is also true that in theory trading in security tokens could also be organised using permissionless blockchains and decentralised platforms. Such novel ways of transacting in financial instruments might not fit into the existing regulatory framework as established by the EU acquis for financial markets.

Question 108. Do you think that the EU legislation should provide for more regulatory flexibility for stakeholders to develop trading and post-trading

solutions using for example permissionless blockchain and decentralised platforms?

◉ Yes

◎ No

◎ Don't know / no opinion / not relevant

108.1 If you do think that the EU legislation should provide for more regulatory flexibility for stakeholders to develop trading and post-trading solutions using for example permissionless blockchain and decentralised platforms, please explain the regulatory approach that you favour. Please explain your reasoning.

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes, especially for decentralized lenders (DeFi) and decentralized exchanges (DEXes).
> I would start with a sandbox approach, guidelines on EU securities legal framework and then a Regulation on the use of decentralized platforms and permissionless blockchain (if security tokens). The delocalisation aspect is highly important in view of the need for a quick uniform standard across the EU, rather than enacting a directive regulatory approach.

Question 109. Which benefits and risks do you see in enabling trading or post-trading processes to develop on permissionless blockchains and decentralised platforms?

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Blockchain systems work in a fundamentally different way compared to the current trading and post-trading architecture. Tokens can be directly traded on blockchain and after the trade almost instantaneously settled following the validation of the transaction and its addition to the blockchain. Although existing EU acquis regulating trading and post-trading activities strives to be technologically neutral, existing regulation reflects a conceptualisation of how financial market currently operate, clearly separating the trading and post-trading phase of a trade life cycle. Therefore, trading and post-trading activities are governed by separate legislation which puts distinct requirements on trading and post-trading financial infrastructures.

Question 110. Do you think that the regulatory separation of trading and post-trading activities might prevent the development of alternative business models based on DLT that could more efficiently manage the trade life cycle?

- ○ Yes
- ○ No
- ◉ Don't know / no opinion / not relevant

110.2 Please explain your reasoning for your answer to question 112:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 111. Have you detected any issues beyond those raised in previous questions on specific provisions that would prevent effectively applying EU regulations to security tokens and transacting in a DLT environment, in particular as regards the objective of investor protection, financial stability and market integrity?

- ○ Yes
- ○ No
- ◉ Don't know / no opinion / not relevant

111.1 Please provide specific examples and explain your reasoning for your answer to question 111:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 112. Have you identified national provisions in your jurisdictions that would limit and/or constrain the effective functioning of DLT solutions or the use of security tokens?

- ◉ Yes
- ○

No

◉ Don't know / no opinion / not relevant

112.1 Please provide specific examples (national provisions, implementation of EU acquis, supervisory practice, interpretation, application, ...) and explain your reasoning for your answer to question 112:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

> Yes, the complete lack of legislation or guidance on crypto assets has a stop all approach in regard to authorizations, opening of business bank accounts, and the accountancy procedures for any business models involving crypto securities (Romania)

C. Assessment of legislation for 'e-money' tokens

Electronic money (e-money) is a digital alternative to cash. It allows users to make cashless payments with money stored on a card or a phone, or over the internet. The e-money directive (EMD2) sets out the rules for the business practices and supervision of e-money institutions.

In its advice on crypto-assets, the EBA noted that national competent authorities reported a handful of cases where payment tokens could qualify as e-money, e.g. tokens pegged to a given currency and redeemable at par value at any time. Even though such cases may seem limited, there is merit in ensuring whether the existing rules are suitable for these tokens. In that this section, payments tokens, and more precisely "stablecoins", that qualify as e-money are called 'e-money tokens' for the purpose of this consultation. Consequently, firms issuing such e-money tokens should ensure they have the relevant authorisations and follow requirements under EMD2.

Beyond EMD2, payment services related to e-money tokens would also be covered by the Payment Services Directive (PSD2). PSD2 puts in place comprehensive rules for payment services, and payment transactions. In particular, the Directive sets out rules concerning a) strict security requirements for electronic payments and the protection of consumers' financial data, guaranteeing safe authentication and reducing the risk of fraud; b) the transparency of conditions and information requirements for payment services; c) the rights and obligations of users and providers of payment services.

The purpose of the following questions is to seek stakeholders' views on the issues they could identify for the application of the existing regulatory framework to e-money tokens.

Question 113. Have you detected any issue in EMD2 that could constitute impediments to the effective functioning and/or use of e-money tokens?

◉ Yes

◉ No

◉ Don't know / no opinion / not relevant

113.1 Please provide specific examples (EMD2 provisions, national provisions, implementation of EU acquis, supervisory practice, interpretation, application, ...) and explain your reasoning for your answer to question 113:

Question 114. Have you detected any issue in PSD2 which would constitute impediments to the effective functioning or use of payment transactions related to e-money token?

○ Yes
○ No
● Don't know / no opinion / not relevant

114.1 Please provide specific examples (PSD2 provisions, national provisions, implementation of EU acquis, supervisory practice, interpretation, application, ...) and explain your reasoning for your answer to question 114:

Question 115. In your view, do EMD2 or PSD2 require legal amendments and /or supervisory guidance (or other non-legislative actions) to ensure the effective functioning and use of e-money tokens?

○ Yes
○ No
● Don't know / no opinion / not relevant

115.1 Please provide specific examples and explain your reasoning for your answer to question 115:

Under EMD 2, electronic money means "*electronically, including magnetically, stored monetary value as represented by a claim on the issuer which is issued on receipt of funds for the purpose of making payment transactions [...], and which is accepted by a natural or legal person other than the electronic money issuer*". As some "stablecoins" with global reach (the so-called "global stablecoin") may qualify as e-money, the requirements under EMD2 would apply. Entities in a "global stablecoins" arrangement (that qualify as e-money under EMD2) could also be subject to the provisions of PSD2. The following questions aim to determine whether the EMD2 and/or PSD2 requirements would be fit for purpose for such "global stablecoins" arrangements that could pose systemic risks.

Question 116. Do you think the requirements under EMD2 would be appropriate for "global stablecoins" (i.e. those that reach global reach) qualifying as e-money tokens?

Please rate from 1 (completely inappropriate to 5 (completely appropriate)

	1 (completely inappropriate)	2	3	4	5 (completely appropriate)	Don't know / no opinion / very suited
Initial capital and ongoing funds	○	○	○	●	○	○
Safeguarding requirements	○	○	○	●	○	○
Issuance	○	○	●	○	○	○
Redeemability	○	○	●	○	○	○
Use of agents	○	○	○	●	○	○
Out of court complaint and redress procedures	○	○	○	●	○	○

116.1 Is there any other requirement under EMD2 that would be appropriate for "global stablecoins"? Please specify which one(s) and explain your reasoning:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

116.2 Please explain your reasoning for your answer to question 116:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 117. Do you think that the current requirements under PSD2 which are applicable to e-money tokens are appropriate for "global stablecoins" (i. e. those that reach global reach)?

- ○ Completely agree
- ○ Rather agree
- ● Neutral
- ○ Rather disagree
- ○ Completely disagree
- ○ Don't know / no opinion / not relevant

117.1 Please explain your reasoning for your answer to question 117:

5000 character(s) maximum
including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Additional information

Should you wish to provide additional information (e.g. a position paper, report) or raise specific points not covered by the questionnaire, you can upload your additional document(s) here:

The maximum file size is 1 MB.
You can upload several files.
Only files of the type pdf,txt,doc,docx,odt,rtf are allowed
